

Abrasion (Taber Test)

Principle

Taber abrasion is a test to determine a plastic's resistance to abrasion. Resistance to abrasion is defined as the ability of a material to withstand mechanical action such as rubbing, scraping, or erosion. Abrasion can be difficult to compare but haze variation or weight loss are often evaluated.

ASTM D4060

Capabilities

- Abrasion tests by Taber Abraser

Assets

	Asset	Details
	Standard Taber Abrasion Tester	Taber tests at room temperature with calibrated abrasive wheels.
