

EHS

EHS - Introduction

SAP EHS (Environment, Health and Safety) is one of the SAP modules, supporting with its different functionalities environmental, occupational and product safety processes, regulatory compliance, and corporate responsibility.

This is accomplished by embedding corporate policies, compliance, and environmental, health and safety capabilities with global business processes for human resources, logistics, production and finance.

Getting a EHS account

To get a SAP EHS account,

1. Fill in [RCS application form](#) and fill it based on what you need.
2. Submit the filled form to the [SBS Support](#) via ticket portal.
3. The Security team will proceed to account validation.
4. Once access is validated the account will be created and you will receive by email your new user /password.

Account creation can take several days due to approval's availability (Based on the applications and perimeter the security team will request several approvals).

**** Note that after your first connection, your temporary password has to be changed.****
