

Cannot find a forecast view file (conversion to excel)

Problem

I am trying to convert a forecast view to Excel. I am following the [procedure](#), but I run into a problem when I am trying to locate the pwf file. I cannot find it.

Solution

When you open the conversion tool, it looks into a default folder: F:\wam\picaso\PicasoGLViews.

If your file is not there, it may have been moved. Even if you locate it in another folder, it may have been corrupted. You may try to move it back to the above location, and convert it again. However, if that does not work, you better just generate a new file from the forecasting console.

Go back to the forecasting console, find your forecast view, and create a new view. Delete the old one. You're all set.
