

## CK862 - Material XXX in plant XXX does not contain any segment for in-house production

- usually its a missing parametrization for the mixed ratios;
- if the material has no valuation type, it's because the master data isn't managed correctly (it has Split Valuation "B" but no Purchased/produced header). So, if it's supposed to be used: either this material shall not be costed, either extended to produced and/or purchased.
