

FD - [CORE] Dictionary

This is a shared dictionary to be used by Quote Team / Campaign Team & Transparency Team.

The working GSHEET is : [\[CORE\] - Pricing Campaign - Dictionary - Google Sheets](#)

In the GSHEET Dictionary you can use the Salesforce Inspector in order to get all detail of fields, then copy/past in the file.

The SHEET Contains initially an extract based on Salesforce Inspector with the following columns :

Field API Name	Label	Type	Description	Value
----------------	-------	------	-------------	-------

Then I arrange it to be :

Object Name	Field API Name	Label	Type	Functionnal Description	Value	Integration	Comment
-------------	----------------	-------	------	-------------------------	-------	-------------	---------

The objective is to have in 1 sheet ALL fields. It will be easier to search common field definition.

Also at a point I would recommend to load the Functionnal description in SF.

We are going to setup specific Filter Views :

- Pricing Campaign
- Price Settings
- Quote
