

# FD - [CORE] Price Settings - Pricing Campaign CPC

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

On the CPC we need to identify if the price setting is active in order to alert the user that this can not be used anymore.

We have two fields to manage this :

## Price Setting is active

Formulat field

- If ( Manufacturing Plant - SKU . is Active = False OR Shipping Plant - SKU = False OR Region and Market Pricing = False ) then FALSE
- Else TRUE

## Price setting inactive reason

This will be used to display in the UX reason of deactivation

Formulat field

- If (Price setting is active = true) then ""
- Else concatenate the following
  - If ( Manufacturing Plant - SKU . is Active = False ) then "Manufactuing plant is inactive"
  - If ( Shipping Plant - SKU = False ) then "Shipping plant is inactive"
  - If ( Region and Market Pricing = False ) then "Region and market pricing is inactive"
