

1.4 Sub group and members management

Management sub groups and projects

- Depends on size of Project team and Group, you may use sub groups to manage set of projects
- You may have multiple numbers of sub groups under main group
- You may have multiple numbers of sub groups under sub group
- You may have multiple numbers of projects within sub group
- Use cases of sub group can be separate source code for access, functionality , technical stack etc

Management group members

- Members (developer, maintaner etc) are managed in the main group or sub groups
- Role has to be set for each members (e.g owner, maintainer, developer)
- Direct member for sub group have access to the projects in the sub group
- Sub group can be added as member of another sub group to grant access to the target sub group (e.g SUB Group C is partnar vendor developers which need to access to the projects for maintanance/support)
