

# SDS management

Within Solvay, we currently have two main databases to manage Safety Data Sheets:

- Sinequa which is the portal to manage Solvay Safety Data Sheets: here is the [link](#) to access it
- 3E Online which is the tool the Group recommends to use to manage Raw Materials Safety Data Sheets

Each site can manage its chemical inventory and the associated Safety Data Sheets thanks to 3E Online application

3E Online is managing the update requests for each SDS available in the database and this allows sites to have updated SDS without losing too much time.
