

# OH Reporting tools

## Occupational Health indicators

HSE OH team collects once a year Occupational Health (OH) data in order to generate **OH indicators at Group level**. Sites are expected to report every year in December these **OH data** which concern some aspects of their activity in OH performed throughout the year.

The procedure [IND-HSE-OH-01.01-GUI](#) (under revision) specifies the objective of each OH indicator, as well as the OH data to be reported by the Sites.

The new HSE reporting tool is **PURE**. Presentation of the tool (incl. end-user training) is available on a [dedicated page](#).  
**To report the OH data for your Site (every year in December), click on the icon (on the left) to directly access to PURE.**

## Occupational diseases

The procedure [IND-HSE-OH-01.01-GUI](#) specifies both complementary steps for [internal reporting](#) of Occupational Disease (OD) data: during the yearly HSE reporting campaign for OH indicators (each year in December), the Site gives a positive answer to the item related to ODs in

**PURE**

**at the same time (or better, as soon as the information is received), the Site provides the [Country Medical Referent](#) (if any) or the [Regional Medical Coordinator \(Comed\)](#) with detailed (anonymous) data on the ODs, as described on the [dedicated page for OD reporting](#).**

Mireille Boonen or the Medical coordinator of your region
