

# From Preventing accidents to Creating Safety

From Preventing accidents to Creating Safety: HSE management is usually focussed on avoiding “excursions” such as accidents, risk exposure, non compliance. Such management is often mainly **rule-based and system-based**. “**Creating safety**” goes beyond prevention program, systems and tools, with a clear focus on people and the will of everyone to ensure the safety of all. **Leading indicators** that drive performance are privileged over accident monitoring to drive action.
