Drag and drop the metadata table object to the new job and ensure that the schema, table name, filter, number of records are correct.

tSAPInfoCubeInput configuration

MVCOPP01 (tSAPInfoCubeInput_1)

Use an existing connection Connection configuration tSAPConnection_1

Advanced settings Schema Repository SAP:WB1 - MVCOPP01 Edit schema

Dynamic settings InfoCube

View Name MVCOPP01

Documentation Max row number 100

Validation Rules

Column	Sign	Operator	Value(Or low value for "Between" op...	High value(only necessary for "Betw...
OFISCPER	Include	Equal	"2021001"	""

Use FTP-Batch Options

FTP Batch

File Protocol SFTP

Host context.ftpHost Port context.ftpPort

User context.ftpUser Password context.ftpPwd

Directory context.ftpFolder Data filename prefix "current_data_file"

In case of a lot of records, it is required to use FTP-Batch option.

1.4. Click on the sync column to get the new schema on tLogRow if you want to see the output during the run of the job or delete this job

1.5 Add the context g_CNX_SAP_xxx on the server that need to be connected.

1.6 Enter the parameter context to connect to GCP

The rest of the job will extract the data from SAP and generate the file on the local folder, then upload it to the bucket that we enter in point 1.6
