On 26th February 2020, SYENSQO launched an ambitious sustainability plan for the next 10 years.

There are 10 targets which are structured under three pillars: Climate, Resources and Better Life.

For the environment, the targets are (2018 being the baseline):

- 1. Reduction by 25% of the freshwater withdrawal by 2030**
- 2. Reduction by 30% of the non-recoverable Industrial waste (landfilled or incinerated without energy recovery)**

There are additional internal targets (not to be communicated externally):

- 3. Stopping by 2030 deposits in landfills of Hazardous Industrial Waste when technically feasible**
- 4. Eliminate SVHC (Substances of Very High Concern) :**

- **by 99% for the black SVHC**
- **by 90% for red SVHC (excluding CO emissions)**

For the implementation of the environmental targets of the plan you can contact the Environment experts
