

Sprint Retro 2

What went well (We nailed it)	What to improve on (Oops!)	Action Item
<p>I wasn't necessary! (Scott)</p>	<p>I still forget sometimes if I'm creating a user story, task, or how much detail to put, or not put. It feels easy to slip "backward" without Kofo's assistance!</p>	<p>Remembering to update user stories on a daily basis.</p>
<p>Discussion w/ Toms and Team on Data Access</p>	<p>Over estimating confidence to complete user stories within specified sprint.</p>	<p>Prioritizing pop-up tasks for next sprint rather than working on them same day/week.</p>
<p>Helix Upgrade - Creating Reports and Exporting seems faster (ish)</p>	<p>Accurately determining how many story points to assign to story items.</p>	
<p>Continue to become more comfortable navigating and updating Jira cards</p>	<p>Grooming out all tasks required to complete certain user stories.</p>	
<p>We are able to stay on task on days where we have short meetings or less communication.</p>	<p>Achieving a balance on how much to work on the first week of the sprint and how much to save for the second.</p>
