## Operations

### 1. F2G playbooks MP industrial operation

This standard links to F2G playbooks to be found [here](#). This does not aim to be a synthesis of these playbooks nor a summary but a way to provide access and highlight their use.

If you want to get a glimpse of what F2G playbooks provide, [click here](#).

These playbooks can help site operations to apply / update the Spend Review Challenge process adequately (SRC) as no no standard nor best practices were fully shared among the group prior to this.

These playbooks cover the following packages:

- Safety and protection
- Industrial cleaning
- Industrial equipment rental
- Industrial consumables (mainly filtration)
- Processing chemical products
- Inlet water treatment
- Medical staffing
- QMSC

Some prerequisites are required before applying these playbooks:

- Site spend analyzes
- Contract mapping at site level
- Spend Review Challenge template (see example in following [link](#)) to be filled upfront supported by the two above points

Many internal solutions providers are involved depending on the work packages in scope i.e.,:

- ME Industrial operations team
- Site buyer and category buyer
- Site manager / HSE manager / maintenance manager
- GBU co-owner to plan and organize SRCs
- Technical experts (ME or GEC) depending upon the playbook
