

Composites - Customer Engineering Portal Home

This portal is intended to be a 'go-to' space that will assist the Global Customer Engineering team to branch out and find the information they need. It should also be a 'live' space that grows and evolves - please look for opportunities to add to & update these pages.

Use the 'Page Tree' to navigate to relevant information

guidelines

This site is limited to Syensqo access - so is secure for business use. However, it is NOT ITAR- or EAR-compliant - so direct addition /storage of controlled data is not suitable.

As a general guideline, store your data in approved, relevant locations (Google Drive, AODocs, Sharepoint, etc.) - but you can then safely add 'links' to these locations. Access to those locations will be controlled by the locations' administrators.
