

Common Issue

blocked URL

Issue : " I found that the system can be very slow sometimes, how can i do reduce this and make it faster "

Tips and Solution to avoid this issue :

How to do it ?

- **Reduce the number of rows**

- To do so : You can choose to display few rows using the menu, next to the search bar you can find in all the sections

The screenshot shows a table titled 'Batches' with a search bar and a 'Rows' dropdown menu. The dropdown menu is open, showing options: 1, 5, 10, 15, 20, 25, 30, 50, 100, 200, 500, 1000, 5000, and All. The table has columns: -, Active, Status, Supplier Code, and others. The data rows show 'Registered' and 'Delivered' statuses for 'ETT241' and 'ETT2051' supplier codes.

- **Reset the number of columns displayed (show only the columns you need)**

- You can click on the filter column, and a pop up will appear, it will help you hide or display columns in the table.

The screenshot shows the same 'Batches' table with a 'Columns' dropdown menu open. The dropdown menu has options: Filter, Data, and Format. The table data is the same as in the previous screenshot.

- Show more filters
 - Use the action menu
