

NEST Analyst

The **NEST Analyst** is a software developed by **ACOEM** used to load vibration data (collected by the data collector and / or online system) and perform analyzes to estimate the operating conditions of the equipment beyond the next estimated failure. NEST Analyst ensures system reliability by managing data related to vibrations collected continuously or at periodic intervals (MVP), as well as data related to processes, thermography and oil analysis, as well as taking into account the operating conditions of the machines. Its advanced features let you correlate information for useful analysis and data transfer through user-friendly interfaces.

NEST Analyst is particularly versatile and makes it easy for process managers, maintenance staff and vibration analysts to work.

This software program offers automatic processing operations and comprehensive displays, allowing users to focus on the essentials. With its powerful analytical and reporting tools, NEST Analyst offers exceptional capabilities to monitor, monitor and diagnose the health of rotating machines.

NEST Analyst is available to Paulinia site (LAM) and Chalampé site (EMA). For other sites please contact SBS-IST-STREAM-AEI@solvay.com.
