Extract data from SAP:

Open a new window in SAP (if we're gonna do PF1, we open a PF1 window, and so on) > Perform macros "**Press for PF1**" and "**Press for WP1**" > the values in column Y will be filled in automatically > Perform "Text to columns" if necessary.

Login SAP and use transaction **GR55** >
Report Group **Z4F3** > Fill in the data.

For Systems PI1 (Only Manually):

- > Copy the value from the line **"Net Result"** and the column of the **month we intend**, to column **Y** in the excel file
- > Perform "Text to columns" if necessary.

Check for gaps between BFC and SAP:

Once the BFC (columns L and P) and SAP (column Y) values are complete, we will have the difference in EUR between the two in column V of the excel file > Filter these differences by values above and below 3k > The companies that have this difference will be the ones we will have to analyze.

STEP 10

Follow up the differences:

For the companies with gaps like described above, send email to CAM with the CAD in the loop as the example.

Victoria, Michaela <michaela.victoria@nyersgo.com>
to Simon, João ▾

Dear Simon,

Could you please provide justification for the P&L difference identified between SAP and BFC in March and in April?

CHECK:

The screenshot shows the RStudio interface. The R console on the left displays the execution of the 'get_data' function, which returns a data frame with columns 'Country', 'CountryName', 'BFI', and 'GFI'. The Environment pane on the right shows the 'get_data' function object. The Source pane on the right shows the code for the 'get_data' function.
