- 3/ Price Settings inactivation
- 4/ VAT

1/ Table Features

- All One Quote line items are displayed on line that can be expanded
- Main information are displayed on every lines
- At Draft Status, user can update the following fields: (1)
 - Ship To
 - Incoterms
 - Estimated annual volume
 - Quoted Price

At All One Quote stage :

The screenshot displays the 'Configuration & Products' section of a software interface. At the top, there are tabs for 'Chatter', 'Details', 'Configuration & Products' (which is active), 'Rebates', and 'Email Offer'. Below the tabs, there's a search bar and several buttons: 'Display 147', 'Compact Report', 'Add Product', and 'Detail for Approval'. A table lists quote line items with columns for Product, Ship To, Incoterms, Estimated annual volume, UOM, Guidance, Filter, Last Quoted Price, Quoted price, ICMT%, Status, and Action. Two items are visible, both for 'Product 5' with 'HENKELS AG & CO.' as the ship to. The first item has an estimated volume of 1000 and a quoted price of EUR 44.00. The second item has an estimated volume of 2000 and a quoted price of EUR 30000.00. Below the table, there's a detailed view for 'Product 5'. It shows 'Ship To' as 'RHODACAL BSS 70MRL BULK', 'Incoterms' as 'CIP', and 'Estimated annual volume' as 14. There are also buttons for 'Clear Filters' and 'Line Status: OK'.

- The Account manager can Sort all columns except "Action" (2)
- The Account manager can use a Quick find search (3)
 - Product Level 5
 - Ship To
 - Ship To Code (PRS /RCS)
- The Account manager can use a filter panel to filter : (4)
 - Product Level 4
 - Incoterm
 - Ship-to
 - Approval Status
 - Accepted by the customer?

- Can be yes, no or none

Unable to locate Jira server for this macro.

It may be due to Application Link configuration.

- Approver

- The Account manager can see the additional filters or remove filters if needed one by one (5) of all of them (6).

Unable to locate
Jira server for this
macro. It may be due

configuration.

Unit of Measure (UOM) (7)

The field is a select list that is used to specify the unit of measure used for a particular product.

- Field is pre-populated using UOM value selected on ONE Quote record
- End user can change this selection when adding products on "Add products" screen
- By default, user can select any standard UOM for each line item added to ONE quote
 - (Standard UOM's: **G, KG, LB T**)
- Additionally, if selected product supports alternative UOM's, they will be available for selection
 - (Currently supported alternative UOM's: **L, GAL**)

UOM Selection can be found here [FD - \[CORE\] Alternative Units of Measure \(UOM\)](#)

Full epic for alternative UOM's and it's features

configuration.

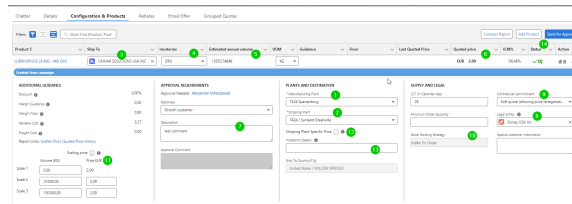

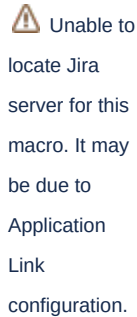

1/ Set OQLI data

The Account manager need to fill some data at OQLI level.

1.1/ Manufacturing plant

User can select From the object "Material plant SKU" and the record that match the following :

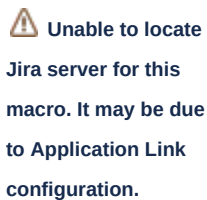

- OQLI. Product = MPSKU
Product
- MPSKU.Record type =
Manufacturing plant
- MPSKU is Active

If there are only one option available then the system autofill the Manufacturing plant field

If there are more than one option the system display a dropdown list where the user need to select the appropriate Manufacturing plant

Additional Rule

To avoid any confusion on dummy plants by region and avoid issues on price guidance calculation, The Manufacturing plant is set as read only on the OQLI LWC if One Quote BU = "AT - Polymer Additives"

1.2/ Shipping plant

User can select From the object "Material plant SKU" and the record that match the following :

1.3/ Ship To

The Ship to is automatically set to the Quote.
Ship To.

1.4/ Incoterms

Incoterms are set automatically base on the Quote.Incoterms

- OQLI.Product = MPSKU.Product
- MPSKU.Record type = Shipping plant
- MPSKU is Active

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

If there are only one option available then the system autofill the Manufacturing plant field

If there are more than one option the system display a dropdown list where the user need to select the appropriate Manufacturing plant

However the user can decide to remove it and change it to a new one.

The user can select ANY ship to. (no restrictions are applied)

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

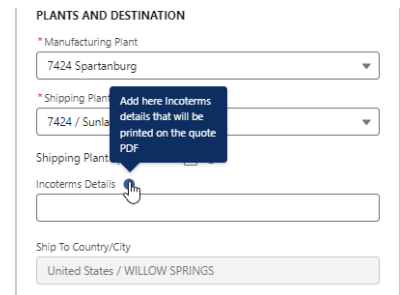

The Ship To Country / City is also displayed below ship to. It is related to the field :

OQLI.Ship To.SLV7_ACC_Country__c

However the user can decide to change it to any values

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

Incoterms details (13) can be added here. They will be added to the Email PDF of the quote

1.5/ Estimated Annual Volume

This field is a manual entry from the user in order to specify the Estimated Annual Volume of that product for the Sold to.

Based on the value set, the system will automatically try to identify the appropriate volume bracket based on the following :

- Product Level 4 + Quote.Region + Quote.Country + Is Active ==> RMP

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

- Country level is only active for Aroma

1.6/ Quoted Price

The quoted price need to be set by the user.

At OQLI creation the quoted price is prefilled to the Price Guidance.

If the quoted price is below the "Price Guidance" it is requested to set a "Rationale". A validation rule will test this rule

==> Describe calculations of all prices : See [2 / Price Settings Calculation](#)

==> Described calculation of VAT : [see 4/ VAT](#)

==> JPY quotes : a quote with JPY currency can not move to Send for approval if there are some decimals in the quoted price or any scale price.

A warning message is displayed if the user clicks on "Send for Approval"

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

 Warning
Decimal values are not allowed for Quoted Price when the currency is JPY.

1.7/ Description & Special Customer information

The user can add any comment in the description. It is used by the Account manager to share information with the line approver.

The Special Customer information set by the Account Manager will be set in the Quote PDF

If a combinaison Product Level 4 + Quote. Region + Quote.Country + Is Active is found we select the RMP otherwise we try to go at : Product Level 4 + Quote.Region + Quote. Country + Is Active

- Estimated Annual Volume ==> Volume bracket
 - For all volume bracket of the RMP select the max "From Volume" where From Volume >= Estimated Annual volume

Based on that selection the following fields are calculated :

- Margin Guidance
- Price Guidance

Yearly Financial Impact has been removed

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

1.8/ Legal Entity

Prefilled with the quote Legal Entity

Can be modified by the account manager

1.9/ Contractual Commitment

By default it is set to Soft.

User can change it to the following :

- Contract (separate, written, legally binding document)
- Hard quote (preventing price renegotiation before end date)
- Soft quote (allowing price renegotiation before end date)

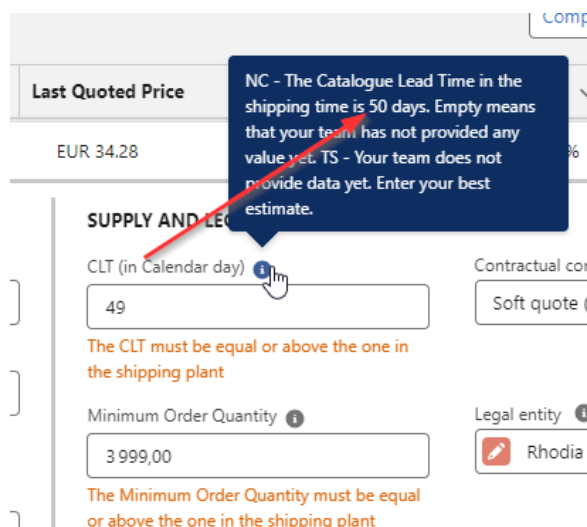

1.10 / Minimum Order Quantity & Lead Time Days

When the Shipping plant is specified or updated we retrieve the following information and set it to the One Quote Line Item :

- Can not be modified :
 - Stock Holding Strategy
- Can be modified :
 - Quote Line . Minimum Order Quantity = Shipping Plant . Minimum Order Quantity
 - Quote Line . Lead Time Days = Shipping Plant . Lead Time Days

The Account manager can change these values following some validation rules :

- The "Lead time" must be greater than the established catalogue lead time
- You can't define a minimum order quantity below the catalog one.:
[SLV49_Minimum_order_quantity__c]

Comp

1.11/ Scale Pricing

The Account Manager can specify 3
Scale pricing if needed.

By clicking on "Enable Scale Pricing"
we have the following behaviour

- New small table that display
the following :
 - Bracket 1 :
 - From
 - Must be above from the Bracket 1.
 - Price
 - Must be above from the Bracket 2.
 - Bracket 2 :
 - From
 - Must be above from the Bracket 2.
 - Price
 - Must be above from the Bracket 3.
 - Bracket 3 :
 - From
 - Must be above from the Bracket 3.
 - Price
 - Must be above from the Bracket 3.
- Validation rule based on the
Price are set :

Scale	From	Price

Please
update
prices.

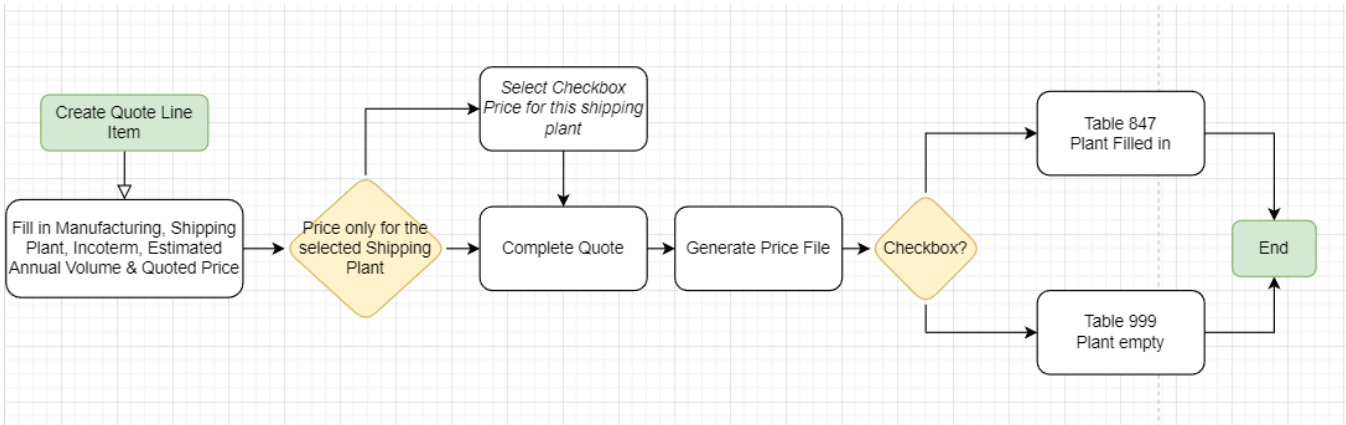

- The Minimum price set here will be used in the Approval Process : [FD - \[CORE\] 5 - Approval](#)

If the user unsets the "Enable Scale Pricing" all the bracket and price are set to null.

1.12 / specific shipping plant

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

Let the Account manager have the possibility to decide if my price applies to a specific shipping plant or to all.

This field is used in both fields : SLV44_SAP_Plant & SLV44_SAP_Table from OQLI.

See the detail here : [SF - Novocare - Data push to SAP](#)

1.13 / Created from CPC

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

If the Display the field "Created by CPC" in the OQLI - SLV48_Created_by_CPC_c in the OQLI LWC as a blue label below Scatter Plot

Only display it if the value is TRUE

1.14 / Status

 Unable to locate Jira server for this macro. It may be due to Application Link configuration.

At every OQLI we calculate a Status on the fly.

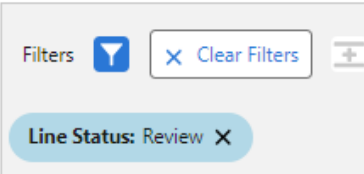

1/ The line has all valid settings and it has a Scale Pricing

2/ There is a warning on the line such as missing information, it blocks the status to be moved to Send for Approval

3/ The line has all valid settings

Compact Report Add Product				
Quoted price	ICM%	Status	Action	
EUR 2.09	-56.46%	✓ 1	🗑	⌵
EUR 1.00	-108.00%	⚠ 2	🗑	⌵
EUR 4.09	55.00%	✓ 3	🗑	⌵

The Account manager is able to filter it if needed in order to eas the process to update lines.

1.15 / Last Quoted price

⚠ Unable to locate Jira server for this macro. It may be due to Application Link configuration.

We calculate **Last Quoted Price & Last Quoted Quote Line** when we insert a line to a quote (add product or renew) :

- Status = Draft
- Every modification of “Account OR Region OR BU OR Product Level 5 OR Manufacturing Plant OR Shipping Plant OR Incoterm OR Ship-to”

“We need to find the last quoted price send to SAP”

The last quoted price logic is as the following

- We try to find first an Active QLI with the key : Account + Region + BU + Product Level 5 + Manufacturing Plant + Shipping Plant + Incoterm + Ship-to + **Status = Closed Sales Started + SLV44_Is_Active__c = True + Accepted by Customer = True**
- If not, we look up the most recent- QLI (quote.SLV44_Quote_valid_to_External__c most recent) in Closed Sales Started & Accepted by Customer = true
 - Account + Region + BU + Product Level 5 + Manufacturing Plant + Shipping Plant + Incoterm + Ship-to + **Status = Closed Sales Started + Accepted by Customer = True**
- If not, we look up the most recent - QLIs (quote.SLV44_Quote_valid_to_External__c most recent) in Expired & Accepted by Customer = true
 - Account + Region + BU + Product Level 5 + Manufacturing Plant + Shipping Plant + Incoterm + Ship-to + **Status = Expired + Accepted by Customer = True**
- If nothing is found, then it displays empty.

Last Quoted price is displayed on the table view of the OQLI

2/ Price Settings / Calculations

==> [FD - \[CORE\] Quote Price Settings](#)

Freight Guidance Granularity Display

Every time relevant information change in the Quote we reset the following records in the OQLI :

- Manufacturing Plant
 - Set by user, see 1.1
- Shipping Plant
 - Set by user, see 1.2
- Region and Market Pricing*
 - See 1.5
- Volume Bracket
 - See 1.5
- Freight Guidance
- Transfer Cost

⚠ Unable to locate Jira server for this macro. It may be due to Application Link configuration.
