

Safety Climate

Safety climate : is the shared perception of the **safety culture** by people, the way they perceive and express how the organization deals with HSE, and the strength and style of the prevailing **safety leadership** . The safety climate can be measured via a safety climate assessment. A Safety Climate Assessment is a process consisting in gathering perceptions of people about safety via a combination of quantitative (survey) and qualitative (interviews) analysis to understand the current culture and identify improvement actions.
