

# Picaso run does not show in SAP

## Problem

I have inserted production runs in Picaso, but if I go to see one of the codes I have MD04 in sap completely empty.

## Solution

1. First, verify if the run is [exportable](#).
2. If it is exportable, run a diagnostic. Go in [Process Order Uploads table](#) in [ADM](#), and find the Process Order Upload table.

a. Use the filter option to narrow the list down. Typically, use whichever parameter that is relevant (here, the SKU code will do). Using the date of last upload is generally a good idea:

(scroll right to find it)

b. The notes will help you figure out what the problem is:

Typical notes	Meaning	Solution
Please specify the order deadlines in ascending order	The Picaso-to-SAP interface tries to create a Planned order with a negative duration. This is due to the <a href="#">schedule upload lag adjustment</a> being greater than the <a href="#">QC lag</a>	You want to make sure that the QC lag is always greater than the Schedule upload lag adjustment. It likely that the QC lag had been updated, but the Schedule upload Lag adjustment was forgotten.

Process Order Update FAILED System status TECO is active	The Picaso run maps with a planned order in SAP that has already been converted to a Process order, and this Process order has been TECOed.	The Picaso run is likely to be deleted since Production is either completed or cancelled.
Version 0001 does not exist for material 44317 in plant ORF	The Picaso-to-SAP interface tries to create a Planned order for which the production version in SAP does not exist.	For units that always use Prod Vers 0001, verify if PV has to be created.  For other production units, check coherency of the <a href="#">formula</a> used in the run. The formula maps with the SAP Production version
Production version 1 for material 56814 in plant TAV is locked
