

The mirror does not create PReq

Problem

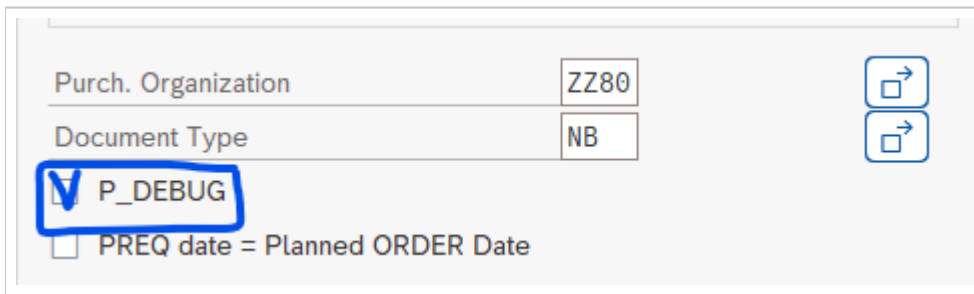

The mirror is activated for the shipping plant / receiving plant / material combination. However, it does not generate any PReq.

Solution

- Verify the material configuration (find it in the [activate the Mirror](#) mirror, in the '**2.Material Master Update**' section). Make sure that the various MRP fields are updated *in the right plants*.
- If that does not fix the problem, create a PReq with ME51N. If you cannot, this might explain. And the error message you will receive along the way is your diagnosis.
- If you can create a PReq with ME51, but the Mirror does not create any, run transaction ZDP_1C_PUSH (you may have to ask security to run it).
 - in the selection screen (right-hand panel), enter
 - material, shipping plant, receiving plant
 - Test mode : deactivated
 - Delete Purchase Requisitions: active
 - Extra Parameters: active
 - with filter (without safety stock)

- page down to find the P_DEBUG flag, and activate it.

- all other fields can remain as is

- hit: . The program will (should) fail at creating a PReq, since this is why you are reading this documentation. It will tell you why.
