

I am not able to connect to Jira from Confluence

When I am trying create a Wiki page with linkage to Jira from Confluence, I am shown that I need to "Login & Approve".

You are seeing this issue because your account in Confluence is not allowed to access your information on Jira.

As the Wiki has a proxy server now, the built-in authentication flow is blocked.

Since the flow is blocked, you will see this issue until you authorized the access.

To overcome this issue, please follow the steps below.

Create a change log

You are viewing this selected server as anonymous. You may want to [Login & Approve](#).

Title

About change logs

Keep a log of your teams progress or communicate deliverables. Generate a static or dynamic list of Jira issues from a saved search, Jira URL or JQL query.

Close

Step 1:

Make sure you are login on both the Confluence and Jira.

Confluence Wiki Link:
<https://wiki.syensgo.com>

Jira Link:
<https://solwayagile.atlassian.net/>

On Confluence:

On Jira:

 Search
 

Step 2:

Click on the link below to **Allow** Confluence to read and write data from Jira.

<https://wiki.syensqo.com/plugins/servlet/applinks/oauth/login-dance/authorize?applicationLinkID=bbf5f9ee-7f3e-3274-bb6e-be12673f2166>

Welcome to JIRA

The application **Confluence** would like to have **read and write** access to your data on **solvayagile.atlassian.net**. The application will be allowed to use your credentials to authenticate (Darren ONG) as you in the future.

Allow

Deny

By allowing this, you can use **JIRA** without storing your JIRA password in **Confluence**.

[Click here](#) to view or revoke application permissions.

Authentication successful! You can now continue with the original operation.

Step 3:

After you see the authentication is successful, you can redo your operation with Jira normally.
