

# Risk Radar - Real Time Risk Monitoring Tool

## Risk Radar

*As of June 2025 - The Real Time Risk Monitoring tool is discontinued. A new tool will be put in place as part of the SyWay project.*

Your tool for Supply Real Time Risk Management

### What is Risk Radar?

|                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>WHAT IS RISK RADAR?</b> | <p>Risk Radar is a tool from Sphera (previously called RiskMethods) which monitors the supply chain by automating and accelerating detection of events which can impact Solvay's operations.</p> <p>Risk Radar compiles information from open source data (geo-risks, country-risks) and from premium data (if subscription).</p>                                                                                                                                                                                                                             |
|                            | <div><ul style="list-style-type: none"><li>• Political situation country</li><li>• Financial stability supplier</li><li>• Natural hazards</li><li>• Local events</li><li>• Environmental</li><li>• Regulatory &amp; legal</li><li>• Innovation potential</li></ul></div> <div><ul style="list-style-type: none"><li>• Location disputes</li><li>• Labor practices &amp; human rights</li><li>• Disasters at business partner site</li><li>• Information / IT Security</li><li>• Pandemic outbreaks</li><li>• Staff disputes</li><li>• Quality</li></ul></div> |
| <b>HOW IS IT WORKING?</b>  | <p>Buyers receive notification per email when a risk is identified on his/her supplier or locations he/she monitored (example: harbor).</p> <p>Buyer can log into Risk Radar to have an overview on his suppliers.</p>                                                                                                                                                                                                                                                                                                                                        |

### How Risk Radar is currently used?

|            |                                                                                                                                                                                                                                                                                                                          |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How</b> | <p><b>After receiving an alert:</b> contact the supplier to ensure the event has no impact on our operations, build an action plan if needed.</p> <p><b>To prepare the supplier meetings:</b> log into the Risk Radar platform and look at the differents alerts and score (especially from a financial perspective)</p> |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### What is the process for creating and updating the list of users, suppliers, locations, etc.?

A limited number of suppliers can be monitored in Risk Radar. Therefore, a request form will be required to add and remove a supplier.

For supplier update and creation/update of location, Syensqo sites and supply chains, you can do it by yourself directly in Risk Radar or you use the Request Form.

[Request Form here](#)

|               | Additional request                                                               | Deletion request | Update request  |
|---------------|----------------------------------------------------------------------------------|------------------|-----------------|
| User          | Complete the Request form*                                                       |                  |                 |
| Supplier      | Complete the Request form*                                                       |                  | Self- service** |
| Location      | Self-service** <i>(Product owner* available for any support and mass update)</i> |                  |                 |
| Own sites     | Self-service or request form** <i>(Product owner* available for any support)</i> |                  |                 |
| Supply Chains | Self-service or request form** <i>(Product owner* available for any support)</i> |                  |                 |

\* The current Product Owner is Anne-Gaël Le Strat ([anne-gaellestrat@syensgo.com](mailto:anne-gaellestrat@syensgo.com))

\*\*Minor updates can be modify by yourself directly in the tool (labels, business units, etc.)
