Toxicological and Ecotoxicological Risk Assessment (TERA) Unit

What is TERA's purpose?

Provide toxicological & environmental risk assessment expertise, to support GBU product stewardship activities and to technically represent Solvay or its GBUs in consortia and sector groups and this aligned with the GBU needs.

While ensuring regulatory compliance of Solvay products, TERA toxicologists are committed to using innovative strategies to predict or assess the toxic properties of substances in order to limit animal testing (application of the 3Rs principle (Replacement, Reduction, Refinement)) and control the costs.

More about TERA

Find out more about our role and missions and meet the members of the team in this [presentation](#).

What can TERA do for you?

GBUs can count on TERA when safety information on Solvay substances & products and their uses needs to be generated, interpreted and evaluated, e.g. in case of regulatory data submissions, product defense and product development.
