

# Mass Creation Report

## MASS CREATION REPORT WP1

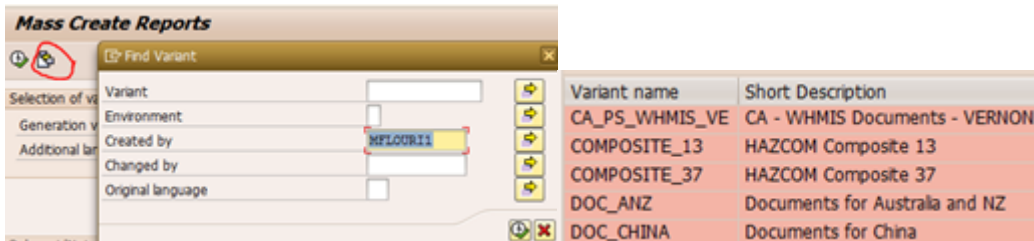

- Also a specific program but directly from CG02
- Principle: From 1 product or a group of products (Hitlist), click on Mass Creation report. It is recommended to be in Display mode so you are sure you saved your modifications.

- Then in the next screen, you can either:
  - Select 1 variant
  - Select manually multiple variants using the yellow arrow at the end of the line

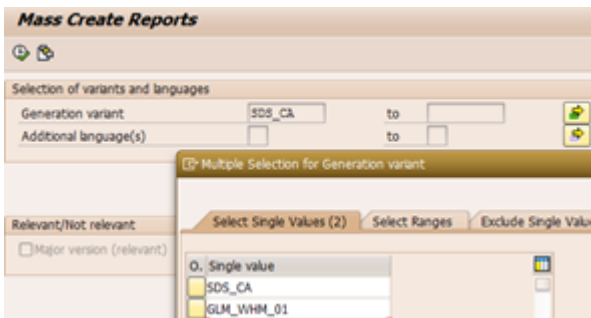

- Select an already made group of generation variants, created by you (leave your user) or someone else (delete your user before executing and it will open all groups)

This simply opens a selection of multiple variants. You can see them by clicking on the arrow at the end of the line (that became green because multiple variants were selected).

Typically a group contains the SDS and labels for 1 country or zone. **Using a group allows you to ensure consistency between the SDS and labels versions.** Example for Canada:

- Languages: no need to add a language since default languages are associated to each variant. Only use to generate a non standard combination of a variant and a language (but in this case, beware of missing translations!)
- Finally, validate in CG50
- Versioning and Revision marks: check out the **wiki** for more details!
