- [Can I build my own Briket theme?](#)

## What is a Briket theme ?

Briket theme is a plugin for Confluence to customize your space to to have a custom look and feel different from the default Confluence space.

It allows the space to look like a website.

## Can I use Briket theme?

Yes, you can reuse existing Briket theme built for other spaces.

However if you want to build a new custom Briket theme for your spaces, appropriate resource will be scheduled and allocated for this. This will require additional efforts to build them. (approximately 10 - 15 mandays)

You will need to justify this request with a project code (TSA) with approval from Demand Manager.

## Can I build my own Briket theme?

In order to avoid impacting the Briket themes built for others, you will not be allowed to do so. Briket theme is only allowed to be managed by the Confluence Administrator team.

Here is a list of Briket theme which you can choose from:
