

How to : build the project from scratch (SpP)

This article applies to the project in **automation environment** or on the **master** branch of the design environment. For more explanation on the environments, please refer to [this article](#).

Manual datasets initialization

Manually create the following dataset by double clicking on it and accessing the "Settings" menu :

- All_run_versions_dataset_bq

All_run_versions_dataset_bq

Connection Preview Schema Advanced

Connection: BIGQUERY_prj-data-pricing-dev [Manage connections](#)

BigQuery project: Leave blank to use the Project ID associated with the connection

BigQuery dataset: DSS_DM

Table: \$[projectKey]_all_run_versions_data

Normalize floats & doubles: ☒ Normalize floating point values (force '42' to '42.0')

Partitioned: **ACTIVATE PARTITIONING**

Connection OK. Table does not yet exist. **CREATE TABLE NOW** TEST AGAIN

Launch scenario

Launch the scenario named "Prod reload" and make sure it runs successfully until the end.

☐	Build SHAP values (id: BUILDSHAPVALUES) Modified 1 month ago	Auto-triggers ☐ OFF No automatic execution
☐	Data - Contracts (id: DATACONTRACTS) Modified 1 day ago	Auto-triggers ☐ OFF No automatic execution
☐	Data - Product composition (id: DATAPRODUCTCOMPOSITION) Modified 1 month ago	Auto-triggers ☐ OFF No automatic execution
☐	Data - Product Taxonomy (id: DATAPRODUCTTAXONOMY) Modified 21 days ago	Auto-triggers ☐ OFF No automatic execution
☐	Full reload Make scenario (id: FULLRELOAD) Modified 7 months ago	Auto-triggers ☐ OFF No automatic execution
☐	Full reload (no extracts) Make scenario (id: FULLRELOADNOEXTRACTS) Modified 21 days ago	Auto-triggers ☐ OFF No automatic execution
☐	Prod reload Prod (id: PRODRELOAD) Modified 1 day ago	Auto-triggers ☐ OFF No automatic execution
☐	Run Hyperparams Opt (id: RUNHYPERPARAMSOPT) Modified 1 year ago	Auto-triggers ☐ OFF No automatic execution
☐	Data - Stockholding strategy (id: STOCKHOLDINGSTRATEGY) Modified 1 month ago	Auto-triggers ☐ OFF No automatic execution

Check outputs

Check that the final BigQuery outputs in the "Dashboard outputs" Flow zone all contain data.
