

# Gitlab Branching Name Conventions

## Environment branches

- env/bugfix
- env/minordev
- env/majorint
- env/majordev1
- env/int
- env/uat
- master (production)

## Feature branches

- Monthly - feature/<jiraKey>
- Minor - minor/<jiraKey>
- Bugfix - bugfix/<jiraKey>

## Release branches

- release/monthly\_<releaseName>\_<releaseNumber>, i.e.
  - release/monthly\_fox\_R93

## Note:

- At this time, we are not creating a release branch for minor or bugfix releases.
- The RM team regularly deploys minor updates and bug fixes on an as-needed basis. We do not create a single consolidated feature branch; for example, if we have five stories, we validate each change (via its respective merge request) and deploy them individually. This approach is driven by our lower deployment frequency on a regular basis.
