

# Developer Onboarding Process

## Account Creation Request

To be able to interact with the various tools and systems at Syensqo, a Syensqo account is required for each developer. No non Syensqo accounts are authorized to have access to Syensqo systems.

If developer is external to Syensqo, request the creation of a Syensqo Account on [Service One](#)

## Calendar Invitations

Depending on the responsibilities of the developer, think to add the account to the Daily / Sprint Planning / Sprint Review meetings.

## JIRA

Once the account is created at Syensqo, request a license for that email address. Once the license has been provisioned, in the Jira Project Settings, navigate to people and add the account of the developer.

(image if necessary)

## Developer Group Access for Google Cloud Platform Access

Depending on the access required for the developer, there are two groups that the user must be added to have access to the GCP projects.

Contact one of the managers in these groups to request access.

For non production projects: <https://groups.google.com/a/syensqo.com/g/gcp-solvextract-developers-nonprod/members>

For production: <https://groups.google.com/a/syensqo.com/g/gcp-solvextract-developers-prod/members>

The Google Cloud Platform projects can then be accessed from the following links

Production : <https://console.cloud.google.com/home/dashboard?project=prd-minchem-solvextract>

Pre-Production: <https://console.cloud.google.com/home/dashboard?project=pprd-minchem-solvextract>

Development: <https://console.cloud.google.com/home/dashboard?project=dev-minchem-solvextract>

## Gitlab

The code repository for Minchem / SolvExtract / Cyanex is hosted on Syensqo's Gitlab server.

For developers working with Customer Onboarding and receiving data from customers, request the developer account to have access to this repository: <https://gitlab-sco.solvay.com/solvay-digital-mining/solvextract-scripts>

For developers working on the Web Application development: grant the necessary access to this project repository: <https://gitlab-sco.solvay.com/solvay-digital-mining/digital-mining-platform>

## Documentation Resources

The current documentation resource is a shared drive owned by the development partner Osedea:

The developer should be granted the necessary access to this folder.
