# 1. Objective and Scope

## 1.1. Objective of this Operation

The purpose of this document is to explain how to generate the proposition and how to account in ERP the valuation of the stocks at the "fair value" in order to give relevant information about the "real value" of the company to all economic actors (share-holders, legal authorities...).

## 1.2. Scope

This procedure is applied to all companies WW.

## 2. Definitions

[Finance - Glossary](#)

## 3. Tasks description

### 3.1. Background

#### \* Hard-Close instruction for Inventory Reserve (please check attachment)

##### Objectives

The purpose of this document is to explain how to generate the proposition and how to account in ERP the valuation of the stocks at the "fair value" in order to give relevant information about the "real value" of the company to all economic actors (share-holders, legal authorities...).

Before the closure in the months of March, June, September and (November and or December)\*. The final validation and postings should be done until D-5 at the latest.

#### General Rules - Frequency (\*Best Practice)

- On a quarterly basis, review the impairment of inventories based on the matrix of inventory and impairment type that is recommended and update an existing inventory reserve.
- At least once a year, justify slow-turn inventory reserve in November for hard-close and NRV inventory reserve in December for year-end close.
- Mandatory for all companies included in the consolidation under full integration
- Recommended for "joint operation", joint-ventures and where Solvay is considered as "associate"
- All types of inventories that need to be written down by below impairment cases:
  - Slow-turn
  - Obsolescence (end of shelf-life)
  - Off-specification / bad-quality
  - Damage
  - Net realizable value

|                 | Slow-turn   | Obsolescence / Off-specification / Bad-quality / Damage | NRV         |
|-----------------|-------------|---------------------------------------------------------|-------------|
| To be validated | In November | In November                                             | In December |
| Finished Goods  | X           | YES                                                     | YES         |
| Intermediate    | YES         | YES                                                     | X           |
| RM              | YES         | YES                                                     | X           |
| Spare Parts     | YES         | YES                                                     | X           |
| Packaging       | X           | YES                                                     | X           |

\*YES means "designated impairment types should be checked for the concerned inventory type"

#### General Rules - Depreciation

- [Standard rule](#) for NRV/LCM and Slow-turn if no local procedure defined.
- [Local procedure for inventory reserve](#) for obsolete, off-spec and damaged inventory reserve

### 3.2. Responsibilities

**SU MAC** runs the transactions and prepares the Excel files with proposal of rotation and financial depreciation.

Controllers are responsible to analyze the posting proposal sent by **SU MAC** and provide the final validation for the depreciation amounts to be posted, indicating the changes to be done to the original posting proposal. In some cases, an additional comment on the largest variances between depreciation proposed and validated is required.

Regarding Spare Parts and Gen & Tech (exc. Packaging) the **Accounting Platform Team** is responsible to perform IFRS vs LOCAL GAAP postings - see specificity on point 3.3) 1) For Spare Parts 1) PF1: Industrial Supplies - DE Specificities

### 3.3. I run inventory valuation reports

STEP 4

extract the report and put in the inventory reserve template

1. there are 2 provision type in the report
2. **Unrestricted provision** is calculated by slow moving day defined by the rule
3. Blocked provision is calculated by amount of inventory in blocked status (100% provision)

STEP 5

## Tasks to be completed when documenting an SAP Transaction, Report or Message code.

1. Title of the page = SAP Transaction code, SAP Report or SAP Message
2. Add the following Labels, respectively:
  - SAP Transaction => "sap\_transaction", Transaction code "xxxx"
  - SAP Report => "sap\_report"
  - SAP Message => "sap\_msg"
3. On the left section, describe the steps. On the right section, insert respective print screens and additional guidelines, if needed (e.g. Main selections of the transaction...)

### STEP 1

Use transaction  
code: ZCO\_SPAREPARTS\_POST

**i** ZCO\_SPAREPARTS\_PO  
ST- Spare parts provision  
posting: Initial Screen

**i** This program is for  
automatic posting of  
spare parts provision  
which data is saved in  
SQ00  
table ZCO\_SPAREPARTS

The data must be  
available in SQ00 before  
processing this transaction

Report for Spareparts Provision Posting

General Selections

|                              |                                     |    |      |
|------------------------------|-------------------------------------|----|------|
| Company Code                 | <input checked="" type="checkbox"/> | to |      |
| Valuation Area               | <input checked="" type="checkbox"/> |    |      |
| Provision Calculation Period |                                     |    | 2021 |

☒ Test Run

Processing Type

☒ Input posting date to post the provision

Posting Date

☐ To reverse the provision with the posting date input

☐ Display reports only

### STEP 2

This program is used to post/reverse  
spare parts provision

There are 3 processing type for this  
transaction

1. Posting
2. Reverse

Processing Type

☒ Input posting date to post the provision

Posting Date

☐ To reverse the provision with the posting date input

☐ Display reports only

### 3. Display

#### STEP 3

#### Fill the selection

##### Selection Parameters:

1. Company code
2. Valuation area **put \* to select all valuation area** or specific the value
3. Provision calculation period: period that the data is extracted to SQ00 (provision period = Feb, May, Aug and Oct)
4. Processing type:
  - Posting = put the posting date as end of quarterly month
  - Reverse = put the same date of the posting to repost the provision or put it in next quarter
  - Display = only display the dataThen execute the transaction

Report for Spareparts Provision Posting

General Selections

|                              |      |      |    |  |
|------------------------------|------|------|----|--|
| Company Code                 | 7180 | 1    | to |  |

## Tasks to be completed when documenting an SAP Transaction, Report or Message code.

1. Title of the page = SAP Transaction code, SAP Report or SAP Message

2. Add the following Labels, respectively:

- SAP Transaction => "sap\_transaction", Transaction code "xxxx"
- SAP Report => "sap\_report"
- SAP Message => "sap\_msg"

3. On the left section, describe the steps. On the right section, insert respective print screens and additional guidelines, if needed (e.g. Main selections of the transaction...)

### STEP 1

Use transaction code:  
Z1K\_SPAREPARTS

You will be able to find four sections:

- Selection Screen
- Layout
- Download to excel

Spare part by Company/ Plants / Profit center / Material

Selection Screen

|                                           |                                     |    |  |  |

Display Options

Layout

**PF2 - Report**  
**Z1k\_SPAREPARTS:** This report will provide you extraction of several fields of the master data of the material as well as stock quantities, values and consumption-

This report is mainly used to provide information for the calculation PF1 inventory reserves:

- Raw Materials
- Spare Parts
- Finished goods (limited)

## STEP 2

## Selection Screen

In the Selection screen, the following data needs to be selected:

- Company code
- Valuation class (Of the material)
- Year
- Month
- The other fields, can be selected depending on the level of detail available /needed
- Layout can also be selected if available (Otherwise can be define after execution)

Spare part by Company/ Plants / Profit center / Material

Layout selection:

#### STEP 4 Extraction to excel

It is possible to extract to excel in two different ways:

1. Excel
2. Local File

Go to list - > Export

and select the option needed

#### IFRS accounts

The Z1K\_SPAREPARTS transaction only uses the G/L account 6310000000 on the debit side which is a limitation for Germany companies, once they use dedicated accounts depending on the material. For **Spare Parts** it should be used the G/L account 6310000020 and for Gen & Tech (exc. Packaging) the G/L account 6310000050, according the following matrix: [PF2 Germany WD\\_Inventories accounts](#).

To guarantee the correct reporting, a manual reclassification will have to be performed by **Accounting Platform Team**.

Debit PL account 6310000020 AND/OR 6310000050 (in order to determine the amount to be transferred take into consideration the balance account, whether it is 2119010000 **Spare Parts** or 2119000000 Gen & Tech (exc. Packaging)).

Credit PL account 6310000000

#### Eliminations accounts

The Z1K\_SPAREPARTS transaction only posts in IFRS. Therefore, elimination will have to be manually performed by the **Accounting Platform Team**:

- **Spare Parts**: post elimination as per the following matrix: [PF2 Germany WD\\_Inventories accounts](#).

Debit BS account B119010009

Credit PL account F310000029

- **Gen & Tech (exc. Packaging)**: not to eliminate (no difference IFRS vs LOCAL GAAP)

Every time there are new users performing this procedure, it's important to maintain them in a specific table, so that they can be considered "Authorized Users to Save Spare Parts Report": T-Code GS02, Table ZCO\_USER\_SPAREPARTS (to be done by the TL).

NOTE All users can run the report (both in foreground and background), but only the User IDs that are maintained in the set ZCO\_USER\_SPAREPARTS can save the report result in the customized table. If the Saving part is not Done, we might have inconsistencies between the proposal posting and the real posting performed by the system.

#### STEP 1

Start the transaction MRN1

**i** Determine Lowest Value:  
Range of Coverage: initial  
screen

#### STEP 2

1. Enter the **company code**
2. **Key date**: Last day of the month = reference date for the calculation of R.O.C.
3. **Material type**: ZMAT : Finished products & RM & SF
4. Click on **Valuation level** to open a new window

#### STEP 3

Select "Company Code"

#### STEP 4

Click on

**Material Stocks**

Enter:

- "Upper limit" = "key date"
- "Lower limit" = "Upper Limit" – 12 months

The range of dates corresponds to the period of analysis of the monthly stocks

and enter 

STEP 5

Click on

Material Consumption

1. Select and enter the range of date in the first range as the analysis period for the determination of consumptions.

and enter 

The option "Determine consumption via user exit" can be selected to apply the rules to calculate the range of coverage (average consumption).

STEP 6

Click on

Base Price

- It is the standard cost of the month
- If the transaction is run before the end of the month:
    - Select the **current material price**
  - If the transaction is run after the end of the month:
    - Select the **Mat. Price Prev. Month**

and enter 

- STEP 7
1. Check "Database Update" and 2 new buttons appear.
    - Never click on "Change Material Price"
  2. Click on
- Update Prices
3. Check "Tax Price 1" to store the price calculated by the system

and enter

Then start the calculation by clicking

on

Ignore the warning message

No material number interval entered. Please check

| 7603                                                   | 133184   | MACHTERRA SSB-70CT PASTILLE 25KG BAGS    | ZMAT | 0.000         | KG  | 0.000               | KG  | 0.000             | 3,200,000  | 0.0       | 3,200,000 | 1,000      |

1. **Material Master Data** & plant code.
2. **Stock quantity** at the end of the month (execution date)
3. **Average consumption** on the last 12 months
4. **Number of months** needed to consume the whole stock with the average consumption = Average stock (2) / Average consumption (3)
5. **Base price** used for the calculation of impairment (= standard cost)
6. **% Deduct** calculated in function of range of coverage (4)
  - Range of coverage < 12 = 0 %
  - 12 < Range of coverage 24 = 50 %
  - 36 < Range of coverage = 100 %
  - 24 < Range of coverage 36 = 75 %
7. **New price** on which the range of coverage is applied = (100 - % Deduct (6)) x Base price (5)

## Tasks to be completed when documenting an SAP Transaction, Report or Message code.

1. Title of the page = SAP Transaction code, SAP Report or SAP Message

2. Add the following Labels, respectively:

- SAP Transaction => "sap\_transaction", Transaction code "xxxx"
- SAP Report => "sap\_report"
- SAP Message => "sap\_msg"

3. On the left section, describe the steps. On the right section, insert respective print screens and additional guidelines, if needed (e.g. Main selections of the transaction...)

## STEP 1

Use transaction code:  
**Z1K\_SPAREPARTS**

You will be able to find four sections:

- Selection Screen
- Layout
- Download to excel

PF2 - Report  
Z1K\_SPAREPARTS: This report will provide you extraction of several fields of the master data of the material as well as stock quantities, values and consumption-

This report is mainly used to provide information for the calculation PF1 inventory reserves:

- Raw Materials
- Spare Parts
- Finished goods (limited)

Spare part by Company/ Plants / Profit center / Material

Selection Screen

Layout selection:

The screenshot shows the SAP S/4HANA Fiori 'Manage Stock' app interface. The top bar includes the title 'Manage Stock' and a 'Filter' button. Below the top bar is a navigation area with icons for various stock management functions. The main content area is divided into two panels. The left panel, titled 'Column Selection', shows a list of columns with checkboxes. The right panel, titled 'Displayed Columns', shows the columns currently displayed in the table. The table itself is visible at the bottom, showing columns for 'Material', 'Storage Location', 'Val. Class', 'Val. Date', 'Stock', 'Loc.', 'Storage Bin', 'Profit Center', 'Material', and 'Material Description'.

## STEP 4 Extraction to excel

It is possible to extract to excel in two different ways:

1. Excel
2. Local File

Go to list - > Export

and select the option needed

## Start the transaction ZWFA21A

1. **Material Master Data** & plant code
2. **Stock quantity** at the end of the month (execution date)
3. **Net Real value** most recent "net real value" on the "key date"
4. **Comparison price:** Price selected in the "comparison price" box (here "price on the previous month")
5. **Lowest price:** Lowest value of the two prices (3) & (4) followed by the price unit
6. **Price date:** Date of calculation of the price
7. **Price Source:** Origin of the price

Unable to render {include} The included page could not be found.

### 3.4. I calculate inventory reserves

Responsibility area: [Calculate and post Inventory Reserve](#)

#### STEP 1

Start the transaction **ZFI\_INVENTORY\_SMOG**

 Inventory SMOG report: initial screen

#### STEP 2

1. Select variant: /SMOG\_TEMPLATE
2. Enter the **company code**
3. **Key date**: Last day of the month before quarterly
4. **Material type**: ZMAT and ZVER
5. The materials with null stock should not be considered in the calculation. The field must to be flagged. Note: The new materials can be excluded by flagging the field "Exclude material created after" - it is not mandatory, it will depends of the business.
6. **Variant layout**: /SMOG\_TP

#### STEP 3

1. Click on "Valuation level"
2. Select "Company code"

and enter

Note: The rate of coverage is calculated at **company code level** and not batch level -The reason is that in some plants we only have the transfer of stock between 2 locations and no sale or consumption, which means that these plants always have 100% depreciation.

#### STEP 4

Click on

Prices/levels

1. Check "Tax Price 1" (where the range of coverage is stored) and "Tax Price 2" (where the Net realizable value is stored)
2. Check "0=0" Level 1
3. Click on **Bal.Sh.Val**
4. Add "Stock Value" to the already selected values.

The calculation of impairment will be based on the lowest of the 3 values

- Stock value (=standard)
- Value Level 1 (= Tax Price 1)
- Value Level 2 (= Tax Price 2)

and enter  if you have a message you can click on

Continue

#### STEP 5

Click on

Material Stocks

Enter:

- "Upper limit" = "key date"
- "Lower limit" = "Upper Limit" – 12 months

The range of dates corresponds to the period of analysis of the monthly stocks

#### STEP 6

Click on

Material Consumption

1. Select and enter the range of date in the first range as the analysis period for the determination of consumptions.

Then execute the transaction

The option "Determine consumption via user exit" can be selected to apply the rules to calculate the range of coverage (average consumption).

Then start the calculation by clicking on

Ignore the warning message

## STEP 7

### SMOG Report Functions

1. The total stock are summarized by the batch stock, non batch stock and stock in transit.

| Account  | Val. Area | Val. Class | Material | Val. Type | Material Description                     | Stor. Loc. | Batch | BatchStock | NoBatchStk | Stock in Transit | Unit | Total Value |
|----------|-----------|------------|----------|-----------|------------------------------------------|------------|-------|------------|------------|------------------|------|-------------|
| 31000300 | 8192      | Z110       | 1825577  |           | PE DRUM 208L PO BLUE Y1.4/150 VENTED     |            |       | 0          | 446        | 0                | PC   | 10,644.35   |

| 30.09.2017 | 701- days  | 30.09.2019 | 0.077     | 0.00     | 0.00     | 0          | 0.00       | 0          | 0.00       | 1        | 3.35      | 0.00      | 3.35        | 0.00  |
| 25.11.2017 | 645- days  | 25.11.2019 | 0.006     | 0.00     | 0.00     | 0          | 0.00       | 0          | 0.00       | 1        | 2.89      | 0.00      | 2.89        | 0.00  |
| 06.12.2017 | 634- days  | 06.12.2019 | 9,999.000 | 1.00     | 3.02     | 0          | 0.00       | 0          | 0.00       | 1        | 3.02      | 0.00      | 3.02        | 0.00  |

- **Fin.Depr:** value is calculated from ZWFA21A stored in field tax price 2 in material master data
- **ROC(M):** value is calculated from MRN1 stored in field tax price 1 in material master data
- **%Reserve:**

If ROC<12, then %Reserve = 0

If ROC>12 & ROC<24, then %Reserve = 0.5

If ROC>24 & ROC<36, then %Reserve = 0.75

If ROC>36, then %Reserve = 1

- **Financial Depreciation:** based on Solvay standard : If source price is 'COPA' and Market price < Total value, then Financial depreciation = Total value - Market price
- **Coverage:** (Stock qty \* % Reserve) \* Standard material price
- **Blocked Qty:** (Off spec material) material batch with blocked status then total batch stock is blocked (100% provision).
- **Blocked Amt:** Blocked Qty \* Standard Material Price
- **Aged Qty:** (Obsolescence material) When the day until expiration is less than 0, the whole batch stock will be aged (100% provision).
- **Aged Amt:** Aged Qty \* Standard Material Price
- **NetCover:** Coverage - blocked amt - aged amt - blocked amt adj
- **FinReserve:** NetCover + blocked amt + aged amt + blocked amt adj
- **Good:** Total value - Financial Reserve

## IMPORTANT

The program **ZFI\_INVENTORY\_SMOG** will prioritize the 3 following rules:

### 1. Identify any blocking stock of the batch

If yes, it will be proposed to be 100% reserved

### 2. Identify the aging of the stock/batch based on Expiration Date

If date expired, it will be proposed to be 100% reserved

### 3. Identify the Range of Coverage (RoC) based on the last 12 months of consumption ( average consumption / average stock)

Reserved proposed based on following ranges

If  $ROC < 12$ , then %Reserve = 0

If  $ROC > 12$  &  $ROC < 24$ , then %Reserve = 0.5

If  $ROC > 24$  &  $ROC < 36$ , then %Reserve = 0.75

If  $ROC > 36$ , then %Reserve = 1, so for cases where ROC is equal or 9.999.00, it means that there is no consume for a long time.

Note: If stock status is blocked or expired **Depreciation is 100%**.

The process is currently processed with the support of one excel template that needs to be updated with the extractions from each transaction mention in section 3.3.

#### Worksheet "Read Me" in the template:

- The excel template contains a Read Me worksheet with the details of how to extract data and fill in each worksheet.
- Some files, might contain one Excel Macro to extract automatically the data from SAP and fill in each worksheet.

#### Prepare Spare Parts data (3.3.1):

1. Go to report Z1K\_spareparts
2. Select variant /SLOWTURN-SP
3. Update the company code
4. Update the year and month
5. After running, extract to excel
6. Copy to **worksheet "SP reserves"**, starting cell A2

**Prepare Raw Materials & Packaging data (3.3.2):**

1. Go to report Z1K\_spareparts
2. Select variant /SLOWTURN-RM
3. Update the company code
4. Update the year and month
5. After running, extract to excel
6. Copy to worksheet "RMPACK reserves", starting cell A2

**Spare part by Company/ Plants / Profit center / Material**

3.5. I send the report to the GBUs

3.5.1. I generate the proposition files

Extract the data in spreadsheet format from ZCO\_SPAREPARTS and ZFI\_INVENTORY\_SMOG

and copy the data to inventory reserves template field A2 in both "RMFG reserves" & "Industrial supplies reserves"

Having the extractions done in section 3.4 related to PF2, each worksheet needs to be completed

#### Worksheet "Read Me" in the template:

- The excel template contains a Read Me worksheet with the details of how to extract data and fill in each worksheet.
- Some files, might contain one Excel Macro to extract automatically the data from SAP and fill in each worksheet.

#### Prepare Spare Parts data (3.3.1):

- Copy the extraction to **worksheet "SP reserves"**, starting cell A2
  - Check the last columns are not overwrite, as these contain the formulas to calculate the reserves

Copy the extraction to cell A2

Have in mind that not to overwrite the last columns:

| Number           |                         | Styles                                                  |                               |
|------------------|-------------------------|---------------------------------------------------------|-------------------------------|
| AM               | AN                      | AO                                                      | AP                            |
| te of Last Count | No. of Slow Moving Days | Depreciation rate for 10% rule<br>(=IF(AL2>365;10%;0%)) | Slow-turn reserve by AJ2*AM2) |
|                  |                         | 0%                                                      |                               |
|                  |                         | 0%                                                      |                               |
|                  |                         | 0%                                                      |                               |
|                  |                         | 0%                                                      |                               |

These columns are the ones containing the formulas to calculate the final res

### Prepare Raw Materials & Packaging data (3.3.2):

1. Copy the extraction to **worksheet "RMPACK reserves"**, starting cell A2
  - a. Check the last columns are not overwrite, as these contain the formulas to calculate the reserves

Copy the extraction to cell A2

Have in mind that not to overwrite the last columns:

| Material Type | Range of coverage | Rate of depreciation | Coverage Slo |
|---------------|-------------------|----------------------|--------------|
|               |                   |                      |              |

| RM            |                   | 100%                 | 100%         |
| RM            |                   | 100%                 | 100%         |
| RM            |                   | 100%                 | 100%         |
| RM            |                   | 100%                 | 100%         |

These columns are the ones containing the formulas to calculate the final res

### Prepare Finished Goods Data (3.3.3):

1. Copy the extraction to **worksheet "FG reserves"**, starting cell A2

### Worksheet "Full stock extraction" :

- Extract through BW, the stock of the company for the period in analysis

1. Refresh this worksheet through Analysis/Prompt
2. Select date (Last day of the month in analysis)
3. Select the company code

Go to "prompt" to perform the refresh

Select the date and company

### Worksheet "Reserve accounts" :

- Extract through BW, the [Balance sheet reserve accounts](#) of the company for the period in analysis

1. Refresh this worksheet through Analysis/Prompt
2. Select date (Last day of the month in analysis)
3. Select the company code

Go to "prompt" to perform the refresh

Select the date and company

- The total amount of the columns with the calculated reserve, should be in column G
- The total amount of company stock retrieved in worksheet "full stock extraction" should be in column C
- The total amount of the Balance sheet accounts coming from worksheet "reserve accounts" should be in column F

[illegible]

### 3.5.2. I prepare the proposition files

## Solvay Template Analysis - Write-off inventories

|                |                                           | Check of Total Stock Amounts |                                                 |             | Check of Reserves Posted           |                                        |             |

**Prepare Spare Parts data (3.3.1):**

- Have in mind that not to overwrite the last columns:

Formula to determine if there is % to be calculated

IF(R2="X";0;IF(AN2>365;10%;0%))

Where column R is related to "critical spare part" and Column AN is related to

| Number | Styles |
|--------|--------|
|--------|--------|

[illegible]

The formulas can change, depending on additional criteria implemented for a

**Prepare Raw Materials & Packaging data (3.3.2):**

1. Check that no formula is missing in the last columns

Have in mind that not to overwrite the last columns:

Formula for Column AO - Material type. Will provide what type of material is.

```
=IF(C2="Z000","RM";IF(C2="Z05L","FUEL";IF(C2="Z05P","FUEL";IF(C2="Z0!  
PACK","RM")))))
```

Formula for Column AP - it is going to calculate the range of coverage (average last 12Months against current stock).

=IF(AO2="RM";IFERROR(AJ2/(AE2/12);100);0%)

Formula for column AQ - to identify what will be the % to be used to calculate

=IF(AP2<12;0%;IF(AP2<25;50%;IF(AP2<37;75%;100%)))

[illegible]

Here, also the formulas can change, depending on additional criteria impleme

### Prepare Finished Goods Data (3.3.3):

[illegible]

### Worksheet "Full stock extraction" :

- Extract through BW, the stock of the company for the period in analysis

1. Refresh this worksheet through Analysis/Prompt
2. Select date (Last day of the month in analysis)
3. Select the company code

Go to "prompt" to perform the refresh

Select the date and company

### Worksheet "Reserve accounts" :

- Extract through BW, the [Balance sheet reserve accounts](#) of the company for the period in analysis

1. Refresh this worksheet through Analysis/Prompt
2. Select date (Last day of the month in analysis)
3. Select the company code

Go to "prompt" to perform the refresh

Select the date and company

Worksheet "Summary" in the template:

1. There is a table to reconcile all stock of the company and retrieve the total amount of reserves posted Vs calculated
  - a. Ensure that column E is zero, as this will confirm that all stock of the company is included in the analysis
    - i. Any difference, should be analysed
  - b. Column H, at this stage of the preparation, this column will not be zero. It will show the different of the current reserve amount to the proposed new reserve amount
- Find as well the rules and assumptions for the reserves calculated

[illegible]

### 3.5.3. I send the proposition files

After the file is completed, send the depreciation proposals to the controllers.

In the message clearly indicate the deadline, which should be D-5 at the latest and request the amount validated for Rotation and Financial Depreciation.
