

# Execute task from the TMC

## Prerequisites

Before you begin, ensure you have the following:

1. **TMC API Access:** You need API access credentials (Client ID and Client Secret) from your Talend Management Console (you can reuse the same credentials of your studio but it's better to create a dedicated one). Your account needs to have the rights to execute the task in the dedicated environment.
2. **Talend Task ID:** The ID of the task you want to trigger (Can be obtained from the TMC console).

```
F002_CSV_to_LabWare
Task ID: 6703d1a426338e762c524571
```

## How to

Following the [Talend API documentation](#) in order to trigger a job you need to call the *execution* method.

```
POST https://api.eu.cloud.talend.com/tmc/v2.6/executions
accept: application/json
Content-Type: application/json
Authorization: 'Bearer ' + BEARER, //the token id from the tmc

{
  "executable": "57f64991e4b0b689a64feed0", //your_task_id
  "logLevel": "ERROR" //WARN, ERROR, INFO
}
```
