

There are many prices in DP but the one that is most used is the "Invoiced price". It's calculated by DFU and it's based on file BW_IH (Invoiced History), which takes the invoiced documents starting from January 1st of Year-3 (if we are in April 2021, we take the documents starting from January 2018).

> For the current month/future: there is a calculation in DynaSys DP who takes the last Invoiced price and extends it into the current month and future.
