

4.1.1a - General

- [Hierarchy](#)
- [Cross Hierarchies](#)
- [Master Table Updates](#)

Hierarchy

- New Master Data table creation should be validated by Application Lead

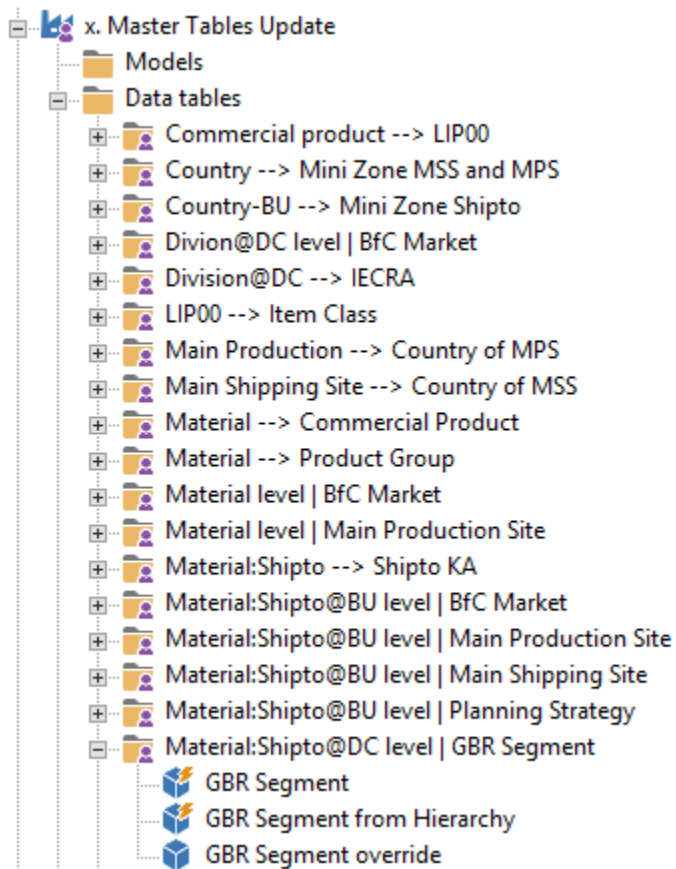

Cross Hierarchies

Best practice :

- Avoid to create new Cross Hierarchies > Limit Cross Hierarchy to 4 levels (Performance Issue)

Master Table Updates

Required Master Table updates should be integrated in the "Master Table Updates"

A new folder with the corresponding dimensions should be created.

For the forcing, at least 3 data have to be created

- Data from Hierarchy (Fed by Master data)
- Data override
- Data

To force the value, a Rule Base is available (to enable to have the value by default in the final data) :

[Home](#) [Tools](#)

RULEBASE

```
PARAMETER i_Default = ENUMERATION(Item)
PARAMETER i_Forced  = ENUMERATION(Item)
PARAMETER o_Final   = ENUMERATION(Item)
```

RULES

```
Execute GenericForcing (i_Default,i_Forced;o_Final)

o_Final = Assignfiltered(o_Final,"=",o,i_Forced,o_Final)
```
