

Move table columns

Depending on what they want to analyse, users need to view specific attributes in the table, in a specific order. This allows them to focus on the specific data they need to work with on the moment.

As they are working with research data, the attributes they want to view may vary a lot on a day-to-day basis.

Jira Issue

[LB-5028 - Authenticate](#) to see issue details

Use-case

Use-case n°1:

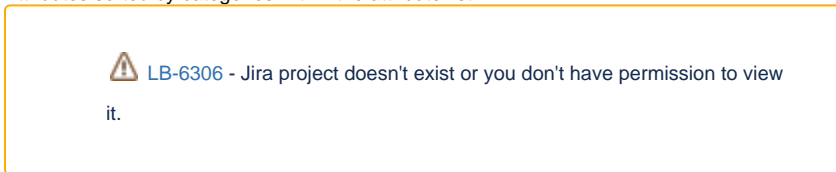

- **Given** the user can choose the order of the table's attributes,
- **When** the user drags and drops an attribute within the list of attribute in a dedicated table configuration section,
- **Then** the table immediately updates:
 - the order of the table's columns is updated accordingly to the order of the list of attributes

Use-case n°2:

- **Given** the user cannot choose the order of the table's attributes directly on the table,
- **When** the user drags and drops an attribute,
- **Then** he cannot move a column

Future Improvements

- Attributes sorted by categories within the attribute list

- Sort columns directly on the table
