

Export

Table export was developed for users to play with their data outside of SyDatalab, in case they need to tweak the data in a way they cannot do in SyDatalab.

In order to protect data, the export limit is set to **50 rows**.

Filters and storings are applied, and hidden columns are not exported.

User can export both in .xlsx or GSheets format.

Jira Issue

[LB-5305 - Authenticate](#) to see issue details

Scenario

Use case n°1:

- **Given** a user wants to export a table with 50 rows or less
- **When** he clicks on "Export" and choses the format
- **Then** the data are exported with the desired format

Use case n°2:

- **Given** a user wants to export a table with more than 50 rows
- **When** he clicks on "Export" and choses the format
- **Then** a message appears to inform the user that only the first 50 rows will be exported and the data are exported accordingly

Future Improvements

- Users are able to select which page they want to export.
- Users can select specific rows to export.
- Exports are tracked within the app.
- Limitation to 5 exports per day per user.
- Limitation of 50 rows can be modified. Set per workflow.
