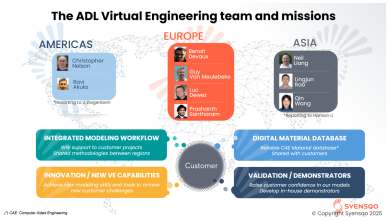
VE Communication toolkit

Introduction to ADL Virtual Engineering capabilities



This presentation introduces our main missions, our standard VE capabilities to support customers and some examples of more recent developments.

These slides can be shared externally, with customers, and are not limited to an "expert" audience.

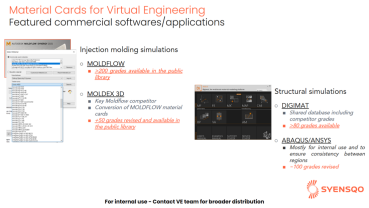
Overview of digital material cards for Virtual Engineering



This presentation describes the different types of material cards that can be generated to support our simulation capabilities and/or specific customer requests.

This presentation is mostly for internal use since it is oriented to a more advanced audience.

But, i f there is an interest to present this specific topic to a customer, please connect with your regional Virtual Engineering team to present these slides.
