

How to apply OSS note on BW systems (WBP, PQ1, PQ2 etc) on Solvay world?

- 1) Create Solman RFC + UC based on the BW system impacted by the OSS note
- 2) Create a new RFC Solman admin gen for Technical team (Adagio team : is-adagio-sap-operations@solvay.com)
- 3) When the technical team create transport request generated by application of OSS note, we can manage with UC the release on all BW systems

For example :

PQ1 OSS note 2227956 - SP35: Arrow Icons not visible in APD
RFC Linked : 7000005898
UC linked : 4000000294

RFC Admin Change : 7000005901
UC Admin Change : 5000000403
