

# Store selection into bookmark

## Creating bookmarks

Bookmarks let you save specific selection states. This allows you to review them later, and share them with other users.

### Create a bookmark

Do the following:

1. Make the selections on the sheet that you want to save as a bookmark.
2. Click [blocked URL](#) in the toolbar.
3. Click Create new bookmark.

The name of the sheet and a summary of the selections are used as the title of the bookmark.

4. If you want another name for the bookmark, change it under Title.

Warning: Do not use a name already used by an alternate state.

5. Enter a description of the bookmark under Description if you want to.

The bookmark is automatically saved.

Tip: When you search in bookmarks, Qlik Sense looks for matches in titles and descriptions.

## States and set expressions

When creating or editing a bookmark, you will see the possible alternate states that have been bookmarked. If a state includes selections, then the set expression for the selections is also shown.

You can copy the set expression by clicking Copy.

Note: If the bookmark selection includes a calculated dimension, the set expression will show MISSING VALUES and cannot be used.
