Sales QTY	Statistical Qty	Budget Qty	DP Qty	DPC Qty						

EXCHANGE RATE

BFC will send 2 exchange rate to SAFIR which will save in table TTX_CARAT, For Prompt Currency objects

- 1, Budget exchange rate
- 2, BFR exchange rate, It also user for Smart, Road Map

SAFIR EXPLOITATION

When the user upload the Budget, BFR data via QuikLoad, data file will be saved into BOXI server immediately, and wait for next SAFIR exploitation. When APO generated the SAFIR data, system will send a message to BOXI, BOXI will start the SAFIR Exploitation. BOXI will go to APO and SMART get the data file, and upload Budget, BFR, SMART & APO data into SAFIR. Usual SAFIR Exploitation start around 10:00AM SG time.

Check Error in REC table

Core report BUDGET & BFR CONTROL CWWSAFIR_001 in folder "10 – Data administration"
or RUL http://pilotcwebpp.priv.rhodia.com/exploit/errors_pe.htm

Data in SAFIR

Budget and BFR,

Usually BU will have a report to extract the previous year sales data, download into excel, fill in the forecast data and upload it into SAFIR.

QL format is flexible for finance controlling:

They can enter the all detail on combination of Unique Ship to * Material

Like Novicare, one zone select one company, and they upload the detail of Ship to And Material.

They can only focus on the sales of company.

Like EP, there are only 96 records in 2013, for one company they only choose one ship to code and material code to upload the data

GL_FORECAST_SPRING(2013)

C_ENT	COUNT(*)
ENTRP00002	669
ENTRP00108	3390
ENTRP00003	4080
ENTRP00030	96
ENTRP00020	37211
ENTRP00162	518
ENTRP00163	36

GL_FORECAST_CR(2013)

C_ENT	COUNT(*)
ENTRP00020	34757

□

SMART, Not every Enterprise and every Zone use the Forecast function in SMART, if you compare the Forecast Sales in SMART and Budget, you have a huge discrepancy.

GL_FORECAST_SMART(2013)	
C_ENT	COUNT(*)
ENTRP00167	84
ENTRP00030	22860
ENTRP00108	11697
ENTRP00020	5244
ENTRP00162	756

APO,

Most of Enterprises are maintaining the forecast with APO:
