## General presentation

### Objective of the application

The aims of the solution and the report is to be able to get the GBU assignment of discount postings that are monthly made in PI1 when related to invoices transferred from WP1 and PF1 to Solvay internal banks (0231/4044) in PI1 in the frame of CAMS processes.

The idea is, from the discount postings to catch in PI1 the corresponding Customer invoices, and thanks to the shared factoring contract number the WP1 /PF1 corresponding Customer items.

Then the GBU can be issued from the Profit center (WP1) or the Business area (PF1) to which the Customer entry is assigned.

The application owner is Ana Silva

The reporting coordinator is Charlotte Rollier.

### Usage information

CICC Accounting team, Controller of Treasury 0231,...

### History

This application was created in 2017 under CAMS project.

## Roles & Access

### Roles and access

Role Code	Role Description	Explanation
ZR_RCS_CA_M61	CDG - CICC Customer Discounts by GBU	Role menu
ZBI_RCS_CDG_A01	Application role for CDG Customer Discount (CICC) :	Application Role: <ul style="list-style-type: none"><li>• End User rights</li><li>• gives access to infoproviders of Infoarea "IA_FMCO_FICD"</li><li>• BI Analysis Authorization "ZBI_CDG" ("*" for authorization objects not relevant for the application)</li></ul>

## Authorization objects

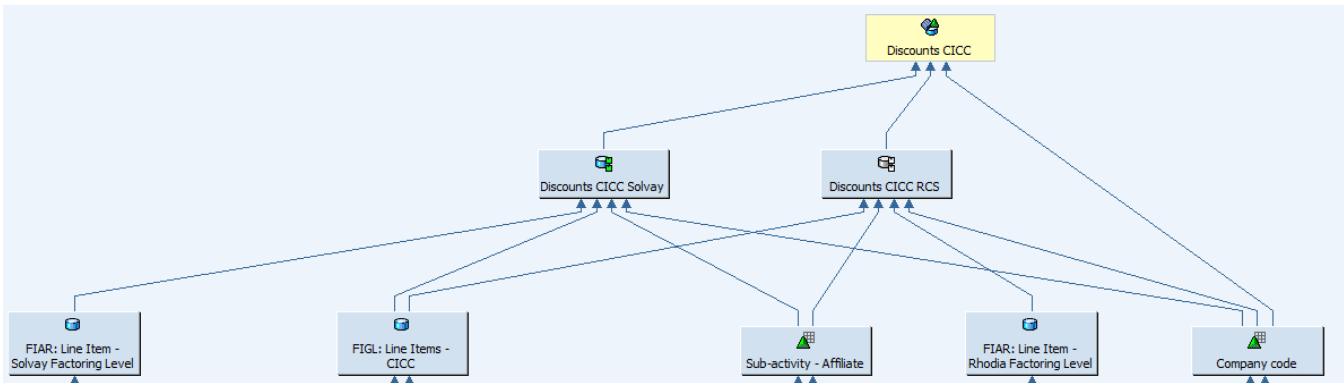

Link to the BW Catalog of role

[https://drive.google.com/open?id=10GEfKYqrT1eeTO\\_uHYAheL1GX7L5y\\_pvH0KQU64qh5l](https://drive.google.com/open?id=10GEfKYqrT1eeTO_uHYAheL1GX7L5y_pvH0KQU64qh5l)

Authorization on company is based on the affiliate PRS company code which seems more appropriate than to restrict by the local company code and do not require to add new roles to Working Capital reporting users.

## Dataflow overview

The solution consists on a multicube based on 2 infosets on FIAR factoring DSO and CICC FIGL DSO.

For information concerning FIAR factoring DSO, please refer to [BW RTR - ITC \(Invoice to Cash FIAR\) \(WBP\) !\ Obsolete !\ wiki](#), part FIAR Factoring data flow.

## Functional and Technical rules on Workbench + Reporting

### Rules & Explanations

#### Infoset joins:

DBFIGL20 DBFIAR15/16 (inner join = only discount posting linked to customer invoices are displayed):

- dbfiar15/16-lgsyslg = dbfigl20-logsys
- dbfiar15/16-c\_compcplg = dbfigl20-c\_compcde
- dbfiar15/16-clear\_date = dbfigl20-pstng\_date
- dbfiar15/16-clr\_doc\_no = dbfigl20-ac\_doc\_no

DBFIAR15/16 C\_COMPCDE (inner join):

- c\_compcde-logsys = dbfiar15/16-lgsyslg
- c\_compcde-c\_compcde = dbfiar15/16-c\_compcplg

DBFIAR15/16 C\_WWE01AF (inner join):

- c\_wwe01af-c\_wwe01af = dbfiar15/16-c\_wwe01af

DBFIGL20 DSO is used to retrieve discounts entries: identified by GL account 6531000000, for companies 0231 and 4044 (filtered in the query).

Customer invoices informations comes from the DSO DBFIAR15 (RCS) and DBFIAR16 (Solvay): entries cleared by the documents selected in DBFIGL20 and that have a posting key 01 or 11 (filtered in the query).

The GBU is the attribute of the sub-activity (affiliate) in DSO DBFIAR15/16.

The company code (c\_compcde) MD is added to the multiprovider (but excluded for the reporting), only for authorization purpose: it enables to restrict authorization by PRS company code as the field generated by the infosets references c\_comprs which is not "authorization relevant" (only c\_compcde\_\_c\_comprs is authorization relevant).

## Dependencies with other applications

This application is dependant with

- **BW RTR - ITC (Invoice to Cash FIAR)** (AR Factoring DSO)

## Data loadings

No loading, only virtual providers were created for this application

## Record Keeping

NA

## Reporting

### Queries End User Documentation

Reporting is available throught a query in the role "CDG - CICC Customer Discounts by GBU" ZR\_RCS\_CA\_M61

## Main queries

BW\_QRY\_MVFICD01\_0001 PI1 Discount report by GBU (Core Query):

Discounts posting are displayed next to the corresponding customer invoices.

There is no rule to calculate the discount amounts from the customer entry when it is not filled. So, potentially, the discounts could be only approximatively split by GBU (total of "discount amount (Cust. inv.)", which is assigned to a GBU, could be less than the "discount (posted)" or 0).

## Main functionalities

No complex functionalities

## Broadcast

No broadcast

## Maintenance

### Known bugs

### Recurring procedure

### Planned Evolution
