

How to use Firefighter on WBP -> OBSOLETE

< TO BE UPDATE BELOW OLD WAY TO USE ff>

General definition :

Firefighter IDs. A **firefighter** ID is a temporary user ID that grants the user exception-based, yet regulated, access. The **firefighter** ID is created by a system administrator and assigned to users who need to perform tasks in emergency or extraordinary situations.

Add an update on WBP :

If you need to have extended accesses in Sap you must use a FireFighter. For that you must be define in the standard table of *users authorized to use a FireFighter*.

When you want to active a FireFighter, select the transaction [/nVirsa/VFAT](#)

Active one of the FireFighter available for you by clicking on the Log On button

Superuser Privilege Management

Owners Firefighters Controllers Security Reason Code Configuration Critical Tcodes
