## **Context:**

This page is to provide tips and best practices regarding BW development.

## Reload & Load on WBP

### Full reload or full repairs

Following the issues about full reload on datasource DTS\_ZWPMR01100 Extractor historical list status order and operations done Monday, 1st October 2018.

Please, any new full or full repair should be tested on WBQ before + if it is a very important reload a roll-out plan should be done and approved by BW team + reporting leader.

Below the link of roll-out plan template :

On WBQ, it is not a real pre-prod environment but we can do some reload with split by company code or plant + period and to have an idea of the volume of the data for production.
