

SAP WEB IDE

- Context:
- Database system
- AWS Server

Context:

Web link to display and develop calculation views, procedures and other HANA objects on database level as alternative to HANA Studio usage.

Intended people:

It is technical process that should be used by all developers.

Use:

Based on the main menu is possible to edit/display views or create replication tasks from non-SAP systems by the **EDITOR**, to display data from tables and run sql scripts by **CATALOG**, check authorizations according to the roles in **SECURITY** and to check the performance results and other improvements according to the **TRACES**.

SAP HANA Web-based Development Workbench

Editor

Create, edit, execute, debug and manage HANA Repository artifacts

Catalog

Create, edit, execute and manage HANA DB SQL catalog artifacts

Security

Create users, create roles, assign objects and manage security

Traces

View, download traces for HANA applications, set trace levels

- CATALOG

The screenshot shows the SAP HANA Web-based Development Workbench interface. On the left, there is a 'Favorite' sidebar with a tree view containing 'Catalog', 'Public Synonyms', and several system-specific folders like 'PT99376211', 'SAPSR3', 'SAP_REST_API', 'SYS', 'SYS_XSA', 'SYS_XS_UAA', 'SYS_BI', and 'SYS_BIC'. The 'SYS_BIC' folder is expanded, showing 'Column Views' with a list of views including 'FPA_SPATIAL_DATA.chorople' and 'FPA_TIME_DATA.DayGranular'. The main area displays a SQL console with a query: `SELECT * FROM "_SYS_BIC". "Solvay_IA_DPS/CV_DY_BL_DYN22_CPDYN11/_BIC_C_FCSTMTH/hier/_BIC_C_FCSTMTH"`. Below the query, the 'Result1' tab shows a table with 8 rows and 7 columns: 'QUERY_NODE', 'RESULT_NODE', 'PRED_NODE', 'LEVEL', and 'LEVEL_NAME'. The status bar at the bottom indicates the statement was successfully executed in 1262 ms.

Warning

The HANA web ide doesn't fully replace HANA studio because the tool is not able to work with the BW modelling perspective for objects such as infoobjects, composite and aDSO.
