General presentation

The new wiki link for this data flow is here:

[BW RTR - Profit and Loss by sales order \(P&L\)](#)

Please update the doc there and no longer here.

Objective of the application

The objective is to have a new P&L dataflow, same as original (MVCOPA01 & queries BW_QRY_MVCOPA01_0004 + BW_QRY_MVCOPA01_0007) with four new fields:

- Sales Order
- Item Order
- Market Cluster
- Team Cluster.

We created a new hana data flow (calculation views and composite provider) to avoid to store the data.

We not added the new fields in MVCOPA01 flow, because the volume would have been too large.

Dataflow overview

The dataflow is composed by 4 calculation views and one composite provider.

Calculation view:

- CV_FMCO_COPA_PL_BFC_0001

In the file below you can find the providers used as sources in calculations view and origin of each fields + filters applied.

Main queries

BW_QRY_CPCOPA03_0001 equivalent of query BW_QRY_MVCOPA01_0004, same fields, same CKF and RKF, only sales order, sales order item, market cluster and team cluster added in free characteristics.

BW_QRY_CPCOPA03_0002 equivalent of query BW_QRY_MVCOPA01_0007, same fields, same CKF and RKF, only sales order, sales order item, market cluster and team cluster added in free characteristics.

QVSBS_BW_QRY_CPCOPA03_0001 equivalent of query QVSBS_BW_QRY_MVCOPA01_0004, same fields, same CKF and RKF, only sales order, sales order item, market cluster and team cluster added in free characteristics.

About CKF and RKF we keep same incrementation number, for exemple BW_CKF_CPCOPA03_0001 it's same thing (for CPCOPA03) as BW_CKF_MVCOPA01_0001 (for MVCOPA01).

The only difference between CKF and RKF between MVCOPA01 and CPCOPA03, it's in CPCOPA03 we use "[VF_CCDE_COMPPRS_0001] TING Company" instead "[VF_C_COMPCDE__C_COMPPRS_0001] TING Company".

C_COMPCDE__C_COMPPRS in MVCOPA01 has different sources in the assignment, so we redo the same rule in calculations views in field CCDE_COMPPRS.

You can find the documentation on CKF and RKF here:

Known bugs

To open calculations view Rhodia and Solvay, it's necessary to use WEBIDE, it's not possible to open them with hana studio due to a lack of memory.
