- Master Data Global Filter C_GLBFLT

To understand when the data in the Pricing Dashboard was last updated, a dedicated BW query with below information is also feeding the Pricing Dashboard.

- Source query name
- Source query description
- Main Infoprotider
- Part provider
- Date and Time of the last refresh in BW

A BW query can be built on several providers, gathered in a Multiprovider, a Composite Provider or any other virtual object.

Therefore the choice is made for a single query to get the latest request loaded in time, whatever the part provider is.

Query technical information

Query technical name : QV_BW_QRY_CPCOPC00_0001

Composite Provider : **CPCOPC00**

HANA view : **CV_FMCO_TECH_TIMESTAMP**

Query design

There is only one Infoobject used in the query (0BWAPPLNM) to allow the use of a selection variable on it (V_APPLNM).

Other objects are simple fields to display the data.

Filter: QV_BW_QRY_CPCOPC00_0001 - FL ICM - Queris Last Refresh Time

Query result

The list of queries in input is displayed, with the relevant information in lines.

The refresh date and time is a Timestamp format yyyyymmdd hhmmss.

Query Tech ID	Query Description	Infoprovider	Part Provider	Timestamp
BW_QRY_MVSDSO45_SD0001	BW - Invoices details (Core jump).	MVSDSO45	DBSDSO48	20240209133156

BACKGROUND FILTER

Composite Provider

The Composite Provider **CPCOPC00** is the source of the Refresh Query.

It is built on the HANA Calculation View **CV_FMCO_TECH_TIMESTAMP**.

Infoobject OBWAPPLNM is assigned to the Input Parameter IP_QUERIES in order to propagate the query selection into the lower layer of the CV.

Output: CPCOPC00

HANA Calculation View

The Calculation View **CV_FMCO_TECH_TIMESTAMP** is extracting the refresh information for each query to analyze.

First Layer

Projection_1 and Projection_5 : Select the list of Main providers in table RSRREPDIR for query IDs from Input Parameter IP_QUERIES.

Left Join_1 with table RSZELTTXT to get description for each query.

Second Layer

Projection_3 : Table **RSDCUBEMULTI** to get dependent objects for a **Multiprovider**.

Left Join_3 with the list of Main providers from Join_1 to get dependent objects.

Projection_4 : Table **RSOOBJXREF** to get dependent objects for a **Composite Provider or ADSO**.

Left Join_2 with the list of Main providers from Join_1 to get dependent objects.

Projection_6 : Left Join_5 with the list of dependent objects from Join_2 to get next dependent objects.

Projection_8 : Master Data **C_GLBFLT** to force fix dependent objects for a Composite Provider built on CV (No selectable information in XML format).

Left Join_6 with the list of Main providers from Join_1 to get dependent objects.

Third Layer

Union_1 : Merge information from Main providers and dependent objects.

Projection_2 : Table RSDINFOPROVDATA to get last request loaded date and time of a Provider.

Left Join_4 with the union_1 of Main providers and dependent objects.

Fourth Layer

Projection_7 : To exclude redundant lines without part provider.

Rank_1 : To select the last updated Part Provider Type of a Main Provider (sorted descending on Timestamp).

Rank_2 : To select the first Part Provider Type of a Main Provider (1RST, ADSO, CUBE).

Master Data Global Filter C_GLBFLT

In order to force fix dependent objects for a Composite Provider built on CV (No selectable information in XML format), the Master Data **C_GLBFLT** is used with below inputs.

Here the Composite Provider CPCOPA03 will be completed with part providers DBCOPA34, DBCOPA41, DBCOPA36...etc

This list will be merged with all others part providers found in the CV for the Main Provider, and the last refreshed part provider will be displayed in the query result.
