

KPIs

February 2025

Comment:

- Incidents (support and corrective maintenance):
 - Big increase this of incident on reporting, again due to the Office 365 migration and the Analysis for Office macro not visible.
 - One old incident went back in the dashboard queue and we have difficulty to close one Talend incident.
 - Resolution time is good.
- Work Orders and Service requests:
 - Small decrease of the incoming but no decrease on the backlog size due to the Hard freeze period.
 - Consequently, the age is growing a little bit.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	159	149	15	15	13	20	5	99%

Total	144	129	65	120	32	50	14	40

January 2025

Comment:

- Incidents (support and corrective maintenance):
 - Incident backlog still under control despite a pic of activity on reporting due to the migration to Office 365, the Analysis for Excel macro is not visible anymore.
- Work Orders and Service requests:
 - Our backlog size is growing slowly due to the hard frozen period, even if we observe an increase on the demand.
 - For service requests, the resolution time is below our target.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	101	98	10	15	8	20	6	99%

Total	163	129	65	120	29	50	13	40

December 2024

Comment:

- Incidents (support and corrective maintenance):

- Incident backlog still under control.
- Work Orders and Service requests:
 - Strong decrease of the backlog thanks to the effort done at the end of the year to deliver changes before the frozen period.
 - The focus was on the oldest evolutions, reason why the resolution time increased a lot on Reporting and dashboarding allowing a decrease of the backlog age.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	49	75	6	15	8	20	11	92%
Dashboarding	26	23	3	10	12	15	4	97%

Total	149	144	48	120	37	50	29	40

November 2024

Comment:

- Incidents (support and corrective maintenance):
 - Strong decrease of the incoming (-30%) probably thanks to the actions taken on the monitoring and data load control.
 - This month, the global backlog reduced again
 - There is on 40 days old Talend incident we can't close, because the root cause is still under investigation
- Work Orders and Service requests:
 - As incident, a smaller incoming this month and despite this we were not able to decrease again the backlog size.
 - Even if the average age of the backlog is stable, the very old backlog for Dashboarding decreased, so clearly old WO are in our radar to close them.
 - We start to observe the frozen period effect with demand which are stopped before to go in our backlog.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	36	37	6	15	12	20	6	97%
Dashboarding	21	26	6	10	3	15	5	93%

Total	153	142	75	120	53	50	19	40

October 2024

Comment:

- Incidents (support and corrective maintenance):
 - Second month with an incident backlog under control and below the target thanks to new controls which have been put in place and allowed to reduce the number of the data quality issue.
- Work Orders and Service requests:
 - A significant reduction of the work orders (-47) this month despite a normal month in the incoming.
 - As a consequence and because we still have difficulties to close very old WO, the age has increased.
 - Effort to close the oldest WO should continue

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	57	62	6	15	11	20	6	95%
Dashboarding	23	17	8	10	7	15	3	100%

September 2024

Comment:

- Incidents (support and corrective maintenance):
 - We reached a new record during this month with only 8 tickets in our backlog.
 - The performance of the team was very good during this month.
 - Strong incoming the last few days, but the situation is under control.
- Work Orders and Service requests:
 - Again a strong incoming, especially in the service requests.
 - Stabilization of the Reporting backlog and good improvement on Talend backlog size which is below the target for the first time, one or two old evolutions have to decrease the backlog age.
 - Globally, it is an improvement in the backlog size and age.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	67	65	11	15	13	20	5	96%
Dashboarding	25	27	1	10	1	15	7	100%

Total	192	174	125	120	47	50	27	40

August 2024

Comment:

- Incidents (support and corrective maintenance):
 - We reached a record at the end of this month with the lowest incident backlog we never had.
 - Very good performance from the Reporting team.
 - Last attention point on dashboarding (Tableau and CG Calame) where we have 2 old tickets.
- Work Orders and Service requests:
 - For a summer month the incoming was still high and less tickets were closed compare to the incoming.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	60	70	5	15	11	20	8	95%

Total	185	133	144	120	45	50	24	40

July 2024

Comment:

- Incidents (support and corrective maintenance):
 - The incident backlog decreased again this month.
 - Attention point is still about old tickets for Talend and Dashboarding
- Work Orders and Service requests:
 - This month the backlog size decreased but the aging increased because we are not able to close the oldest tickets.
 - Resolution time globally decreased thanks to a big decrease on Reporting, for the rest it was an increase.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	62	57	17	15	13	20	10	96%
Dashboarding	31	34	7	10	21	15	11	91%

Total	231	234	127	120	44	50	22	40

June 2024

Comment:

- Incidents (support and corrective maintenance):
 - Incoming again decreases in June which allowed to continue to reduce the backlog and the resolution time as well. Our pain points are still dashboarding due to a CGI capacity. On Talend the difficulty is really to close the ticket.
 - On Talend the situation has improved, the backlog is back under control but still aged, old tickets have been closed breaching the SLA.
- Work Orders and Service requests:
 - Decrease due to the resolution of the key rotation
 - Good resolution time this month but it is artificial because the backlog age has increased, so it means that old evolutions are not resolved.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	54	55	15	15	22	20	5	96%
Dashboarding	31	37	11	10	21	15	19	93%

May 2024

Comment:

- Incidents (support and corrective maintenance):
 - Lower incoming in May which allowed to reduce the backlog and the resolution time as well. Still have difficulties with dashboarding due to a lack of capacity on CGI side.
 - On Talend the situation has improved, the backlog is back under control but still aged, old tickets have been closed breaching the SLA.
- Work Orders and Service requests:
 - Big increase of the backlog due to the massive creation of GCP service request for key rotation.
 - Number of old tickets were closed this month which provides a bad resolution time but allow to reduce the backlog age.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	59	59	16	15	12	20	9	96%

Total	249	142	188	120	28	50	34	40

April 2024

Comment:

- Incidents (support and corrective maintenance):
 - Still high incoming for dashboards, especially the last migrated ones.
 - On Talend the bottleneck is still visible and the team has difficulty to absorb the incoming.
 - On Reporting, situation is back under control
 - Global SLA is a bit behind our target
- Work Orders and Service requests:
 - Globally lower incoming and better delivery which conduct to a backlog reduction
 - Once again, slownesses are concentrated on Dashboards and Talend

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	62	71	13	15	14	20	13	90%

Total	137	154	93	120	68	50	29	40

March 2024

Comment:

- Incidents:
 - Incoming this month a bit higher than a normal month, still due to the new dashboards and we don't have real tendency for Reporting.
 - Performance to solve the ticket is not good so the backlog increased again but not the age.
 - Also this month the global SLA is under the target due to the Analytics
- Work Orders and Service requests:
 - Reporting continue to decrease for the 3 consecutive months
 - At the opposite and without a higher incoming, the global backlog has increased due to several security alert on Analytics and Service requests for Talend move to prod.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	91	91	30	15	32	20	10	96%
Dashboarding	48	40	23	10	26	15	11	96%

Total	161	124	126	120	62	50	47	40

February 2024

Comment:

- Incidents:
 - Normal global incoming this month but a poor performance to solve them, so the backlog didn't decrease.
 - Continue to increase for dashboarding and Talend, still link to the new dashboards and the lack of motivation and skills in the dashboarding team.
- Work Orders and Service requests:
 - Good decrease this month for Reporting (again) and Talend and we can see that old WO were closed because the age decreased as well.
 - Even with a big incoming on GCP and Dataiku, the backlog is stable.
 - Warning also on Dashboarding because the backlog increased, one agent was off during one week.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	72	67	26	15	32	20	8	97%
Dashboarding	52	50	20	10	18	15	8	100%

Total	169	155	108	120	80	50	31	40

January 2024

Comment:

- Incidents:
 - Still high incoming this month and especially on Dashboarding activity due to the release of the new Tableau and QlikSense dashboard migrated from QlikView.
 - On Talend the backlog starts to grow due to the new dashboards but also the difficulty to close the tickets.
 - On Reporting even if the backlog is high, the team has managed the incoming.
 - SLA under to the expected level
- Work Orders and Service requests
 - Again a good performance on Reporting and dashboarding where we can see the backlogs really decreasing.
 - Strong incoming for Analytics with a lower delivery and the backlog increased, they are at 90% service requests.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	90	92	34	15	22	20	10	94%
Dashboarding	48	39	15	10	15	15	8	89.2%

Total	184	183	111	120	95	50	30	40

December 2023

Comment:

- Incidents:
 - Huge incoming this month with a good resolution rate for Reporting team who has closed more tickets than the incoming.
 - Lower delivery in dashboarding team which increase the backlog size this month.
 - Still a very old incident on Dataiku which pollutes the backlog age.
 - SLAs were respected this month
- Work Orders:
 - Incoming this month is back to normal but not the backlog size which is still very high even if we can observe a small decrease.
 - Backlog age is very high, but it can be explained by the hard frozen period until Jan 21st.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	115	132	33	15	30	20	8	97.1

November 2023

Comment:

- Due to PO2 preparation, a lot of changes have been done on BW authorizations and as a consequence a lot of incident and Service requests have been created.
- Incidents:
 - Except for the Reporting where we have difficulties to absorb the pick linked to PO2, for the rest, the backlog is under control.
 - Still a very old incident on Dataiku which pollutes the backlog age.
 - SLAs were respected this month
- Work Orders:
 - Exceptional incoming this month which downgrade again the backlog size and age.
 - Number of solved Work Orders this month is good as well, at the same level of the backlog size.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA
Reporting	93	64	46	15	15	20	7	96.4

Total	242	154	157	120	71	50	24	40

October 2023

Comment:

- Incidents:
 - The backlog size is under control, but we can observe a backlog age growing due to the difficulty to close solved incidents on Talend
 - Even if there is progress on the very old Dataiku ticket, this one is not yet closed.
 - SLAs were respected this month
- Work Orders:
 - Backlog size and age have increased, this is the consequence of our request to decrease on Q4 30% of the capacity to deliver on Reporting and dashboarding.

Incident	New	Solved	Backlog	Target backlog	Backlog Aging	Target backlog Aging	Resolution time	SLA

Total	150	119	152	120	72	50	29	40

September 2023

Comment:

- Incidents:
 - Good performance on incident resolution except for dashboarding where we still have a backlog a bit higher than the target.
 - Only one very old incident (Dataiku) penalize the backlog aging for the platform, and action has been taken to close this incident in October.
 - On Talend 1 incident breached the SLA providing an average lower than our target.
- Work Orders:
 - Good decrease of the backlog for the reporting
 - Degradation of the backlog age for all even if the resolution time is improving.

August 2023

Comment: Backlog size back to normal but the resolution time has increased.

July 2023

Comment: Strong impact of PO2 this month especially for the reporting applications. Still difficulties for Dataiku and Talend to close old incidents.

About Work Orders, the backlog size is improving but the delivery time not at all which impacts the backlog age.
