

General Data Governance Awareness

Welcome to the General Data Governance Awareness section!

Data Governance is the exercise of authority and control (planning, monitoring, and enforcement) over the management of data assets . It establishes clear policies, roles, and processes to maintain data quality, consistency, and compliance. Strong data governance enables better decision-making, improved collaboration, and greater trust in data.

To learn more about our approach and best practices, refer to the [Data Governance Handbook 2025](#) , which provides a comprehensive guide to our Data Governance Model.

Key Concepts

Data Management is the development, execution, and supervision of plans, policies, programs, and practices that deliver, control, protect, and enhance the value of data and information assets throughout their lifecycle.

Data Governance is the exercise of authority and control (planning, monitoring, and enforcement) over the management of data assets.

Data Quality refers to the planning, implementation, and control activities that apply quality management techniques to measure, assess, improve, and ensure the fitness of data for use.

Why is Data Governance Important to Solvay?

Data Governance is the **core enabler to become a data-driven organization**

In Data-Driven organizations reliable strategic decisions are based on complete, accurate, secure and timely data.

Data Governance is the backbone that will drive **Solvay** to have complete, accurate, secure and timely data, while enabling operational efficiency and becoming more insight-driven.

Implementing **Data Governance** is **fundamental** for building an **insight-driven organization**.

This process requires **clear definitions of key terms** and a **commitment to data quality**.

By **prioritizing high-quality data** and **well-defined metrics**, we can improve your **decision-making capabilities**

This foundational effort will enable you to **leverage insights effectively**, resulting in enhanced strategies and outcomes **across Solvay**.

How are we going to achieve it?

Gaining impactful insights into Solvay's decision-making it will be only possible by integrating the right skilled people, well-defined processes, precise tools, and strong organizational support to meet business needs.

Data Governance Framework

The use of a DG Framework, composed of five elements, helps to organise and structure methods and concepts around DG and tailor them to the specific engagement.

Guiding Policies & Principles

- Describes the **guiding policies and principles** for Data Governance within Solvay.

Roles & Responsibilities

- **Clear defined roles, responsibilities, organisation structure and committees** to enable data governance model to run. Outlines the individuals at Solvay who will direct the application of Data Governance, including the Data Governance Team and Committees.

Processes

- **Outlines structured workflows and procedures** ensuring the Data Governance initiatives are being implemented and deliver value to Solvay.

Tools & Technology

- Outlines the available tools required for data governance, such as business catalog and the data quality monitoring tool. These enable efficient implementation and management of governance activities.

Governance Metrics

- Outline key performance indicators (KPIs) and success metrics to measure the effectiveness of data governance initiatives.

Data Governance Operating Model | Federated Model

Data Governance at Solvay operates under a Federated Model. This model applies to Master Data, as well as Transactional and Calculated Data, utilizing existing resources within the organization.

Data Management Team

- Set the governance (standards & policies) and monitor the implementation
- Define and establishes the Committees, ensuring the operationalization of Data Governance
- Run of the governance team, ensure the adherence to the data governance standards and policies, and provide support when needed

Domains

- Operationalize data governance & management within their data domain
- Responsible to manage their own data
- Follow & collaborate on Guidelines and Procedures for Data Management & Governance
- Collaborate with the Data Management team to share best practices

Data Governance Operating Model | Roles and Responsibilities Overview

Data Governance Lead

Responsible for ensuring the effective Data Governance across the organisation and engaging with Management to continuously promote the topic and its value.

Data Domain Lead

Responsible for orchestrating my data domain, ensuring that data is accurate, accessible, and aligned with the data governance model. Additionally, he/she defines the priorities within the domain, guiding data initiatives to meet organisational objectives.

Data Subdomain Lead

Not mandatory

Data Owner

Responsible for a specific subdomain within a domain. Reports to the Data Domain Lead.

Data Steward

Supports the Data Owner by ensuring the implementation of data requirements, enforcing data rules, and resolving identified data quality issues. Additionally, Responsible for proposing and maintaining definitions for business terms and data elements, as well as documenting and maintaining data lineage.

Responsible for designing, defining, and improving data requirements, data quality rules, and business rules, ensuring data integrity and consistency across the dataset under her/his oversight.

Data Custodian

Responsible a specific data source within an organisation. He/she applies his/her system knowledge and technical skills to support the technical infrastructure to meet Data Governance requirements.

Additional Resources

Data Governance Handbook 2025

This document was created to define key activities within the Data Governance Lifecycle. Its purpose is to:

- **Define the Data Governance Foundations:** Outlines what is Data Governance and how it is run across Solvay
- **Define Roles and Responsibilities:** Establishes well-defined roles responsible for effectively managing, maintaining, and safeguarding data. This model promotes accountability by assigning specific individuals to oversee data governance, quality and management initiatives.
- **Promote Accountability and Oversight:** Ensures designated roles, such as data stewards, are in place to monitor and uphold data governance activities.
- **Facilitate Cross-Functional Alignment:** Creates a unified language and shared understanding of data governance across business areas, fostering collaboration and ensuring that data is used consistently and effectively throughout the organization

General Awareness Training Video

The purpose of this training video is to:

- **Explain Data Management Foundations:** Explain what is Data Management, Data Governance and Data quality.
- **Show Data Management Structure at Solvay:** Explain how Data Management is structured across Solvay and how our Deployment approach works.
- **Explain main Roles and Responsibilities:** Explain the roles that are responsible for effectively managing, maintaining, and safeguarding data.
- **Explore available resources:** Explore the different readily available resources regarding the Data Management Programme.

Data Roles: Data Domain Lead, Data Subdomain Lead, Data Owners and Data Stewards

[illegible]

This Wiki page contains the current list of data roles involved in Data Management initiatives. It includes the designated individuals for the following roles:

- Data Domain Lead
- Data Subdomain Lead
- Data Owners
- Data Stewards
