

Qlik Sense - User Guide

Analysing Result From Qlik Sense

Before analysing result from Qlik Sense, you are to make selection on the sheet that contains the relevant result. When you enter from the Qlik Sense Hub, after you selected the dashboard you wanted to analyse the result, you will have to select the sheet before you are able to view the result of the KPI. For example if you are monitoring on the DSO of customers, you will have to select the sheet Days of Sales Outstanding from Customer Credit & Trade in the SBS Dashboard (as shown below). In case you don't see the full name of the sheet (like the below example, all the sheets have the name

of Customer Credit & Trade...), you may hover your mouse cursor on over the sheet name or click on  to display the full name of the sheet.

The screenshot shows the Qlik Sense interface for a dashboard titled "SBS - Customer Credit & Trade". The dashboard header includes a menu icon, the dashboard name, and tabs for "Analysis" and "Story". Below the header is a large visualization area with a logo and metadata: "SBS - Customer Credit & Trade", "Data last loaded: Apr 19, 2019, 3:51 PM", "Published: Apr 19, 2019, 8:38 PM", and "Published to: SBS".

Below the dashboard is a navigation bar with "Sheets", "Bookmarks", and "Stories" tabs. Under the "Sheets" tab, there is a section titled "Base sheets (5)". Five sheet thumbnails are displayed, each with a bar chart icon and the text "CUSTOMER CREDIT & TRADE...". The first thumbnail is highlighted with a red box. A tooltip for this sheet is shown below, displaying the full name "CUSTOMER CREDIT & TRADE - DAYS OF SALES OUTSTANDING" and other details: "Published: Feb 12, 2019, 5:04 PM" and "Published by: PLEBOUCH (EUA)".

When Sheet Is Open

Do take note that when the sheet is opened, it usually will show the overall/global result. Unless you are monitoring according to overall/global result, otherwise, some selections will required before analysing begins.
