

Qlik Sense - User Guide

Analysing Result From Qlik Sense

Before analysing result from Qlik Sense, you are to make selection on the sheet that contains the relevant result. When you enter from the Qlik Sense Hub, after you selected the dashboard you wanted to analyse the result, you will have to select the sheet before you are able to view the result of the KPI. For example if you are monitoring on the DSO of customers, you will have to select the sheet Days of Sales Outstanding from Customer Credit & Trade in the SBS Dashboard (as shown below). In case you don't see the full name of the sheet (like the below example, all the sheets have the name

of Customer Credit & Trade...), you may hover your mouse cursor on over the sheet name or click on  to display the full name of the sheet.

SBS - Customer Credit & Trade

When Sheet Is Open

Do take note that when the sheet is opened, it usually will show the overall/global result. Unless you are monitoring according to overall/global result, otherwise, some selections will required before analysing begins.
